

MBA 2026

Data Interpretation & Logical Reasoning

DPP: 1

Tables

Directions (1-5) Read the following passage and answer the given questions.

The following table shows the distribution of four different types of monthly expenditures and savings of Aman.

Category	Percentage
Housing	32%
Groceries	22%
Travel	18%
Entertainment	16%
Saving	12%

Q1 If the amount spent by Aman on Housing is ₹16,000, then find the monthly expense of Aman.

- (A) ₹50,000 (B) ₹40,000
(C) ₹44,000 (D) ₹4,400

Q2 If Aman's monthly income is Rs. 40,000, then find the average amount spent on Housing, Groceries, and Travel together.

- (A) ₹7,200 (B) ₹8,400
(C) ₹6,800 (D) ₹9,600

Q3 If a pie chart is drawn for the given data, then what is the central angle made by the amount spent on Entertainment?

- (A) 57.6° (B) 64.8°
(C) 72° (D) None of these

Q4 If Aman lends 50% of his savings to a friend, which is ₹2,400, find the amount spent on Groceries by Aman.

- (A) ₹7,000 (B) ₹8,800
(C) ₹6,000 (D) ₹5,600

Q5 If the difference between the amount spent on Travel and Housing is ₹7,000, then find the annual income of Aman.

- (A) ₹7,20,000 (B) ₹50,000
(C) ₹6,00,000 (D) ₹48,000

Directions (6-10) Read the following passage and answer the given questions.

The table below shows the percentage difference between the number of boys and girls across five schools, along with the total number of students (boys + girls) in each school:

School	Percentage Difference between Boys and Girls	Total number of Students
X	40%	500
Y	22.22%	450
Z	35%	520
W	23%	600
V	17%	518

X	40%	500
Y	22.22%	450
Z	35%	520
W	23%	600
V	17%	518

Percentage Difference between Boys and Girls = $\frac{|\text{Difference between Boys and Girls}|}{\text{Total number of Students}}$

Additional Details:

- In schools X, Z, and V, the number of **girls** is greater than that of **boys**.
- In schools Y and W, the number of **boys** is greater than that of **girls**.

Note: For any fractional values in calculations, round to the nearest whole number.

Q6 The number of girls in schools X and Y together is what percent of the number of boys in schools Z and W together?

- (A) 87.54% (B) 48.5%
(C) 97.58% (D) 92.8%

Q7 Find the difference between the total number of girls in schools Y and W together and the total number of boys in schools X and V together.

- (A) 80 (B) 41
(C) 36 (D) None of these

Q8 What is the ratio of the number of girls in school Y to that of school X?

- (A) 1:2 (B) 7:11
(C) 2:3 (D) 4:9

Q9 In school X, 30% of the girls and 20% of the boys are part of the student council. Find the total number of students in school X who are in the student council?

- (A) 105 (B) 145
(C) 155 (D) 135

Q10 The total number of boys is approximately what percent of the total number of girls across all the schools?

- (A) 76.58% (B) 85.28%
(C) 68.33% (D) 83.55%

Directions (11-15) Read the following passage and answer the given questions.

The table below presents data for six cities—Jaipur, Pune, Chandigarh, Hyderabad, Chennai, and Kolkata—on the following metrics:

1. The number of students who passed the XAT exam.
2. The number of students who failed the CAT exam.
3. The percentage of students who failed the XAT exam out of the total XAT test-takers in the city.
4. The percentage of students who cleared the CAT exam out of the total CAT test-takers in the city.

City	Passed XAT exam	Failed CAT exam	Failed XAT exam	Passed CAT exam
Jaipur	110	126	75%	14.29%
Pune	96	240	68%	16.67%
Chandigarh	319	180	42%	33.33%
Hyderabad	60	162	40%	25%
Chennai	273	224	22%	12.50%
Kolkata	130	252	50%	22.22%

Note: Each student in these cities is eligible to apply for either the CAT or XAT exam.

- Q11** Find the average number of students who passed the CAT exam in Chandigarh, Pune, Chennai, and Hyderabad together.
(A) 45 (B) 46
(C) 56 (D) 55
- Q12** In Jaipur, out of the total number of candidates who failed the CAT and out of the total number of candidates who failed XAT, 50%, and 30% were boys, respectively. Find the total number of girls who failed the both exams.
(A) 294 (B) 300
(C) 310 (D) None of these
- Q13** Find the difference between X and Y, where:
X = Total students who passed CAT from Pune and Chennai.
Y = Total students who failed XAT from Jaipur, Kolkata, and Chandigarh.
(A) 600
(B) 611
(C) 508
(D) None of the above
- Q14** What is the approximate percentage of total CAT students who failed the CAT exam across all cities combined?
- Q15** In how many cities is the difference between the number of students who failed and passed the XAT exam greater than 72, given that the number of passed students is not greater than the number of failed students?

Directions (16-20) Read the following passage and answer the given questions.

A business strategy competition was conducted in which 5 schools A, B, C, D, and E participated in the final round. The event was finally won by school C. The following table gives the number of girls from A, B, D, and E who participated in the event as a percentage of the total students from school C who participated in the event.

School	Percentage
A	40%
B	15%
D	25%
E	20%

It is also known that the ratio of the number of girls to boys in the schools A, B, D, and E who participated in the event was 1:3, 3:2, 4:3, and 5:3 in no particular order.

- Q16** If it is known that 80 students participated from school C, find the difference between the number of boys who participated from school B and school D?
(A) 4
(B) 6
(C) 8
(D) Cannot be determined
- Q17** It is known that the number of boys who participated from schools A, B, D and E were 14, 24, 27 and 30 in no particular order. Find the maximum number of students who participated from the four schools put together?
(A) 235
(B) 225
(C) 210
(D) Cannot be determined
- Q18** It is known that 180 students participated from school C. The maximum number of students who participated is from which school?
(A) A
(B) B
(C) E
(D) Cannot be determined
- Q19** It is known that 80 students participated from school C. Which among the following can be the ratio of the number of boys who participated from school A to the total number of students who participated from school B?
(A) 5 : 6
(B) 6 : 5
(C) 1 : 1
(D) Cannot be determined

- Q20** It is known that 180 students participated from school C. Find the number of boys who participated from school D?
- (A) 27 (B) 45
(C) 72 (D) 36

Directions (21-25) Read the following passage and answer the given questions.

The table given below shows the total number of sanitizers that were estimated to be sold in five states. Out of the total sanitizers sold a percentage of 70% Alcohol sanitizers sold, and a ratio between 30% Alcohol and 0% Alcohol sanitizers is given. Study the data carefully and answer the following questions.

States	Sanitizers that can be sold	70% Alcohol sanitizers sold	30% Alcohol : 0% Alcohol sanitizers
U.P	2300	15%	9 : 8
West Bengal	4500	35%	5 : 8
Telangana	3800	25%	4 : 5
Gujarat	1000	45%	5 : 3
Delhi	1500	20%	8 : 5

Note: 200 sanitizers remain unsold in each state which can be sold.

Total sanitizers in each state = 70% Alcohol sanitizers + 30% Alcohol sanitizers + 0% Alcohol sanitizers + unsold sanitizers

- Q21** Total 70% Alcohol and 0% Alcohol sanitizers sold in West Bengal is approximately what percent more than the total number of 70% Alcohol and 30% Alcohol sanitizers sold in Gujarat state?
- (A) 100% (B) 220%
(C) 375% (D) 408%
- Q22** Total 30% Alcohol sanitizers sold in U.P. is how much less/more than 0% Alcohol sanitizers sold in Delhi?
- (A) 320 (B) 425
(C) 545 (D) 670
- Q23** Find the ratio between total 0% Alcohol sanitizers sold in Telangana and Gujarat together to total 30% Alcohol sanitizers sold in West Bengal and Telangana?
- (A) 1 : 3 (B) 333 : 455
(C) 299 : 311 (D) 457 : 333
- Q24** Find the average number of total 70% Alcohol sanitizers sold by all the five states together?
- (A) 300 (B) 420
(C) 595 (D) 668

- Q25** Find the average number of total 30% Alcohol sanitizers sold by all the five states together?
- (A) 1080 (B) 980
(C) 910 (D) 827

Directions (26-30) Read the following passage and answer the given questions.

A famous Maths book was published in a country in four languages namely, Bengali, Marathi, Spanish, and English. These books were published in two types, "Notebooks" and "Practice books". Some of these books are "Good" and some are "Not Good" according to the feedback given by the students.

The following table gives information on the books published in the country: -

	Bengali	Marathi	Spanish	English
Total number of books published	400	500	200	300
Number of notebooks as a percentage of total books published	60%	80%	40%	70%
Percent of notebooks that were "Good" according to the students	50%	37.5%	25%	40%
Percent of Practice books that were "Not Good" according to the students	12.5%	40%	60%	30%

- Q26** What percent of the total books published in the country received "Good" feedback by the students?
[Approximate to the nearest integer]
- Q27** Books published in how many languages received "Good" feedback for at least 60% of the total books published in that language?
- Q28** What was the percentage of Notebooks out of the total books published in the four languages in the country?
[Approximate to the nearest integer]
- Q29** What was the percentage of Practice books that received "Good" feedback from the students? [Approximate to the nearest integer]
- Q30** Find the total number of Books that received "Not Good" feedback from the students?

Answer Key

Hints & Solutions

Note: scan the QR code to watch video solution

Q1. Text Solution:

Monthly income of Aman is cumulative % of all data.

Category	Percentage
Housing	32%
Groceries	22%
Travel	18%
Entertainment	16%
Savings	12%
Income	100%

Spent on Housing = 32% of Income = ₹16,000

Expense = (32 + 22 + 18 + 16)% of Income = 88% of Income

Aman's expense = $\frac{16000}{32\%} \times 88\% = ₹44,000$

Video Solution:

Q2. Text Solution:

The total amount spent on Housing, Groceries, and Travel together = 32 + 22 + 18 = 72% of Income.

The average amount spent on above =

$$\frac{1}{3} \times \frac{72}{100} \times 40000 = ₹9,600.$$

Video Solution:

Q3. Text Solution:

Total angle formed by the pie chart = 360° which is 100%.

The central angle made by the amount spent on

$$\text{Entertainment} = \frac{16}{100} \times 360 = 57.6^\circ$$

Video Solution:

Q4. Text Solution:

Aman lends 50% of his savings = ₹2400

= 6% of income = ₹2400

The amount spent on Groceries = $\frac{2400}{6} \times 22 = ₹8,800$

Video Solution:

Q5. Text Solution:

The difference between the amount spent on Travel and Housing

= (32% - 18%) of Income = ₹7000

= 14% of Income = ₹7000

The monthly income = $\frac{7000}{14} \times 100 = ₹50,000$

The annual income = ₹50,000 × 12 = ₹6,00,000

Video Solution:

Q6. Text Solution:

For School X:

The difference between boys and girls (Girls -

Boys) = 40% of 500 = 200

Girls + Boys = 500

$$\text{Boys} = \frac{500 - 200}{2} = 150$$

Girls = 500 - 150 = 350

Similarly, the table below shows all the data:

School	Total number of students	Difference between boys and girls		Number of Girls	Number of Boys
		in Percentage	in Values		
X	500	40%	200	350	150
Y	450	22.22%	100	175	275
Z	520	35%	182	351	169
W	600	23%	138	231	369
V	518	17%	88	303	215

The number of girls in schools X and Y = 350 + 175 = 525

the number of boys in schools Z and W = 169 + 369 = 538

The required percentage = $\frac{525}{538} \times 100 = 97.58\%$

Video Solution:

**Q7. Text Solution:**

School	Total number of students	Number of Girls	Number of Boys
X	500	350	150
Y	450	175	275
Z	520	351	169
W	600	231	369
V	518	303	215

The total number of girls in schools Y and W together = $175 + 231 = 406$

The total number of boys in schools X and V together = $150 + 215 = 365$

The required difference = $(175 + 231) - (150 + 215) = 41$

Video Solution:**Q8. Text Solution:**

School	Total number of students	Number of Girls	Number of Boys
X	500	350	150
Y	450	175	275
Z	520	351	169
W	600	231	369
V	518	303	215

The number of girls in school Y = 175

The number of girls in school X = 350

The ratio = $175 : 350 = 1 : 2$

Video Solution:**Q9. Text Solution:**

School	Total number of students	Number of Girls	Number of Boys
X	500	350	150
Y	450	175	275
Z	520	351	169
W	600	231	369
V	518	303	215

In school X:

$$30\% \text{ of the girls} = \frac{30}{100} \times 350 = 105$$

$$20\% \text{ of the boys} = \frac{20}{100} \times 150 = 30$$

The total number of students in school X who are in the student council = $105 + 30 = 135$

Video Solution:**Q10. Text Solution:**

School	Total number of students	Number of Girls	Number of Boys
X	500	350	150
Y	450	175	275
Z	520	351	169
W	600	231	369
V	518	303	215
Total	2588	1410	1178

$$\text{The required percentage} = \frac{1178}{1410} \times 100 = 83.55\%$$

Video Solution:**Q11. Text Solution:**

For Jaipur:

For the XAT exam;

The students passed = 110

$(100 - 75)\% = 110$

$25\% = 110$

$75\% = 330$ students are failed

Total students = $110 + 330 = 440$

For the CAT exam;

14.29% i.e., $\frac{1}{7}$ of the students passed CAT

So, $1 - \frac{1}{7} = \frac{6}{7}$

$\frac{6}{7} = 126$ students failed

$\frac{1}{7} = 21$ students are passed

Total students = $126 + 21 = 147$

Similarly, we can get the below data:

City	XAT			CAT		
	Passed	Failed	Total	Failed	Passed	Total
Jaipur	110	330	440	126	21	147
Pune	96	204	300	240	48	288
Chandigarh	319	231	550	180	90	270
Hyderabad	60	40	100	162	54	216
Chennai	273	77	350	224	32	256
Kolkata	130	130	260	252	72	324

$$\text{The required average} = \frac{90 + 48 + 32 + 54}{4} = 56$$

Video Solution:

Q12. Text Solution:

The final table is like below:

City	XAT			CAT		
	Passed	Failed	Total	Failed	Passed	Total
Jaipur	110	330	440	126	21	147
Pune	96	204	300	240	48	288
Chandigarh	319	231	550	180	90	270
Hyderabad	60	40	100	162	54	216
Chennai	273	77	350	224	32	256
Kolkata	130	130	260	252	72	324

Girls who did not pass;

$$\text{CAT} = \frac{50}{100} \times 126 = 63$$

$$\text{XAT} = \frac{70}{100} \times 330 = 231$$

The answer = 63 + 231 = 294

Video Solution:

Q13. Text Solution:

The final table is like below:

City	XAT			CAT		
	Passed	Failed	Total	Failed	Passed	Total
Jaipur	110	330	440	126	21	147
Pune	96	204	300	240	48	288
Chandigarh	319	231	550	180	90	270
Hyderabad	60	40	100	162	54	216
Chennai	273	77	350	224	32	256
Kolkata	130	130	260	252	72	324

X = Total students who passed CAT from Pune and Chennai.

$$X = 48 + 32 = 80$$

Y = Total students who failed XAT from Jaipur, Kolkata, and Chandigarh.

$$Y = 330 + 130 + 231 = 691$$

The required difference = 691 - 80 = 611

Video Solution:

Q14. Text Solution:

City	CAT		
	Failed	Passed	Total
Jaipur	126	21	147
Pune	240	48	288
Chandigarh	180	90	270
Hyderabad	162	54	216
Chennai	224	32	256
Kolkata	252	72	324
Total	1184	317	1501

$$\text{The required percentage} = \frac{1184}{1501} \times 100 = 78.88\% = 79\% \text{ (approx.)}$$

Video Solution:

Q15. Text Solution:

City	XAT			CAT		
	Passed	Failed	Total	Failed	Passed	Total
Jaipur	110	330	440	126	21	147
Pune	96	204	300	240	48	288
Chandigarh	319	231	550	180	90	270
Hyderabad	60	40	100	162	54	216
Chennai	273	77	350	224	32	256
Kolkata	130	130	260	252	72	324

The cities to be considered are below:

City	XAT		
	Passed	Failed	Difference
Jaipur	110	330	220
Pune	96	204	108
Kolkata	130	130	0

The difference between the number of students who failed and passed the XAT exam is more than 72 in two cities: Jaipur and Pune, where the

number of passed students is not greater than the number of failed students.

Video Solution:

Q16. Text Solution:

It is known that 80 students participated from school C. The number of girls from schools A, B, D, and E will be as follows:

School	Percentage	Girls
A	40%	32
B	15%	12
D	25%	20
E	20%	16

It is also known that the ratio of the number of girls to boys in the schools A, B, D, and E who participated was 1:3, 3:2, 4:3, and 5:3 in no particular order.

The ratio 5 : 3 must be of school D as there is no other number for the total girls which is a multiple of 5. If we take the ratio as 4 : 3 for D then for E we don't have any ratio because 16 is not a multiple of 5 and 3. Similarly, the ratio 3: 2 must be of school B.

For school D, $\frac{5}{8}$ of total = 20

Total students in D = 32

Number of boys in D = 12 ($\frac{3}{8}$ of 32)

For school B, $\frac{3}{5}$ of total = 12

Total students = 20

Number of boys in B = 8

Required difference = $12 - 8 = 4$.

The answer is option A.

Video Solution:

Q17. Text Solution:

It is known that 80 students participated from school C. The number of girls from schools A, B, D, and E will be as follows:

School	Percentage	Girls
A	40%	32
B	15%	12
D	25%	20
E	20%	16

It is known that the ratio of the number of girls to boys in the schools A, B, D, and E who

participated was 1:3, 3:2, 4:3, and 5:3 in no particular order.

Boys will be $\frac{3}{4}$ of the total, $\frac{2}{5}$ of the total, $\frac{3}{7}$ of the total and $\frac{3}{8}$ of the total.

It is given that the number of boys who participated from the mentioned 4 schools is 14, 24, 27 and 30 in no particular order.

For maximum value, we need to have

$\frac{3}{8}$ of total 1 = 30

Total 1 = 80

$\frac{3}{7}$ of total 2 = 27

Total 2 = 63

$\frac{3}{4}$ of total 3 = 24

Total 3 = 32

$\frac{2}{5}$ of total 4 = 14

Total 4 = 35

Maximum strength = $80 + 63 + 32 + 35 = 210$ students.

The answer is option C.

Video Solution:

Q18. Text Solution:

School	Percentage	Girls
A	40%	72
B	15%	27
D	25%	45
E	20%	36

It given that 180 students participated from school C and so the number of girls from schools A, B, D, and E will be as shown above.

It is known that the ratio of the number of girls to boys in the schools A, B, D, and E who participated was 1:3, 3:2, 4:3, and 5:3 in no particular order.

Since we do not know the particular order, we cannot identify the school with the maximum participation.

The answer is option D.

Video Solution:

Q19. Text Solution:

It is known that 80 students participated from school C. The number of girls from schools A, B,

D and E will be as follows:

School	Percentage	Girls
A	40%	32
B	15%	12
D	25%	20
E	20%	16

It is also known that the ratio of the number of girls to boys who participated in the schools A, B, D and E was 1:3, 3:2, 4:3, and 5:3 in no particular order.

The ratio of 5:3 must be of school D as there is no other number for the total girls which is a multiple of 5. If we take the ratio as 4 : 3 for D then for E we don't have any ratio because 16 is not a multiple of 5 and 3. Similarly, the ratio of 3 : 2 must be of school B.

Let the total number of students in school B be q .
 $\frac{3}{5}$ of $q = 12$

$$q = 20$$

Let the total number of students in School A be p .

The ratio of girls to boys for school A can be either 1 : 3 or 4 : 3.

If the ratio is 1:3 then

$$\frac{1}{4} \text{ of the total } p \text{ is } 32$$

$$\text{Therefore, } p = 128$$

$$\text{Number of boys from A} = 128 - 32 = 96$$

The required ratio of the number of boys from A to the number of students from B

$$= 96 : 20 = 24 : 5$$

If the ratio is 4 : 3 then

$$\frac{4}{7} \text{ of the total } p \text{ is } 32$$

$$\text{Therefore, } p = 56$$

$$\text{Number of boys from A} = 56 - 32 = 24$$

The required ratio of the number of boys from A to the number of students from B

$$= 24 : 20 = 6 : 5.$$

The answer is option B.

Video Solution:

Q20. Text Solution:

School	Percentage	Girls
A	40%	72
B	15%	27
D	25%	45
E	20%	36

It is given that 180 students participated from school C and so the number of girls from schools A, B, D and E will be as shown above.

It is known that the ratio of the number of girls to boys in the schools A, B, D and E who participated was 1:3, 3:2, 4:3 and 5:3 in no particular order.

The ratio of girls to boys for school D must be 5:3 because if we choose any other ratio then there is no number which could be divided by 5.

Let the total students in school D be s .

$$\text{So, } \frac{5}{8} \text{ of } s = 45$$

$$s = 72.$$

$$\text{Number of boys who participated from school D} = 72 - 45 = 27.$$

The answer is option A.

Video Solution:

Q21. Text Solution:

Total 70% Alcohol and 0% Alcohol sanitizers sold in West Bengal

$$= 4300 \times \frac{35}{100} + 4300 \times \frac{65}{100} \times \frac{8}{13} = 1505 + 1720 = 3225$$

Total number of 70% Alcohol and 30% Alcohol sanitizers sold in Gujarat

$$= 800 \times \frac{45}{100} + 800 \times \frac{55}{100} \times \frac{5}{8} = 360 + 275 = 635$$

Required percentage

$$= \frac{3225 - 635}{635} \times 100 = \frac{2590}{635} \times 100 = 407.87\%$$

So, 408 (appx)

The answer is option D.

Video Solution:

Q22. Text Solution:

$$30\% \text{ Alcohol sanitizers sold in U.P.} = 2100 \times \frac{85}{100} \times \frac{9}{17} = 945 \text{ } 0\% \text{ Alcohol sanitizers sold in U.P.}$$

$$\text{Required difference} = 945 - 400 = 545$$

The answer is option C.

Video Solution:

Q23. Text Solution:

0% Alcohol sanitizers sold in Telangana and Gujarat together

$$= 3600 \times \frac{75}{100} \times \frac{5}{9} + 800 \times \frac{55}{100} \times \frac{3}{8} = 1500 + 165 = 1665$$

30% Alcohol sanitizers sold in West Bengal and
Telangana together

$$= 4300 \times \frac{65}{100} \times \frac{5}{13} + 3600 \times \frac{75}{100} \times \frac{4}{9} = 1075 + 1200 = 2275$$

$$\text{Required Ratio} = \frac{1665}{2275} = \frac{333}{455}$$

The answer is option B.

Video Solution:

Q24. Text Solution:

Total number of 70% Alcohol sanitizers sold by all
the five states together

$$= 2100 \times \frac{15}{100} + 4300 \times \frac{35}{100} + 3600 \times \frac{25}{100} + 800 \times \frac{45}{100} + 1300 \times \frac{20}{100}$$

$$\text{Required average} = \frac{3340}{5} = 668$$

The answer is option D.

Video Solution:

Q25. Text Solution:

States	Sanitizers that can be sold	70% Alcohol sanitizers sold (in %)	30% Alcohol : 0% Alcohol sanitizers	30% Alcohol sanitizers sold (in %)
U.P.	2300	15%	9: 8	$85\% \times 9/17 = 45\%$
West Bengal	4500	35%	5: 8	$65\% \times 5/13 = 25\%$
Telangana	3800	25%	4: 5	$75\% \times 4/9 = 1003\%$
Gujarat	1000	45%	5: 3	$55\% \times 5/8 = 2758\%$
Delhi	1500	20%	8: 5	$80\% \times 8/13 = 64013\%$

So, we can infer that the number of 30% Alcohol
sanitizers sold in the states are:

$$\text{U.P. : } 45\% \times (2300 - 200) = 945$$

$$\text{West Bengal: } 25\% \times (4500 - 200) = 1075$$

$$\text{Telangana: } (3800 - 200) \times 75\% \times \frac{4}{9} = 1200$$

$$\text{Gujarat: } (1000 - 200) \times 55\% \times \frac{5}{8} = 275$$

$$\text{Delhi: } (1500 - 200) \times 80\% \times \frac{8}{13} = 640$$

$$\text{Hence the average is} = \frac{945 + 1075 + 1200 + 275 + 640}{5} = 827.$$

The answer is option D.

Video Solution:

Q26. Text Solution:

We can make a table based on the information
given,

	Bengali	Marathi	Spanish	English	Total
Total number of books published	400	500	200	300	1400
Number of notebooks	60% of 400 = 240	80% of 500 = 400	40% of 200 = 80	70% of 300 = 210	930
Number of practice books	400 - 240 = 160	500 - 400 = 100	200 - 80 = 120	300 - 210 = 90	470
Number of notebooks that were "Good"	50% of 240 = 120	37.5% of 400 = 150	25% of 80 = 20	40% of 210 = 84	374
Number of notebooks that were "Not Good"	240 - 120 = 120	400 - 150 = 250	80 - 20 = 60	210 - 84 = 126	556
Number of Practice books that were "Not Good"	12.5% of 160 = 20	40% of 100 = 40	60% of 120 = 72	30% of 90 = 27	159
Number of Practice books that were "Good"	160 - 20 = 140	100 - 40 = 60	120 - 72 = 48	90 - 27 = 63	311

Total number of books that received "Good"
feedback by the students = 374 + 311 = 685

$$\text{Required percent} = \frac{685}{1400} \times 100 = 48.9\% \\ = 49 \text{ (approx.)}$$

Video Solution:

Q27. Text Solution:

We can make a table based on the information
given,

	Bengali	Marathi	Spanish	English	Total
Total number of books published	400	500	200	300	1400
Number of notebooks	60% of 400 = 240	80% of 500 = 400	40% of 200 = 80	70% of 300 = 210	930

Number of practice books	400 - 240 = 160	500 - 400 = 100	200 - 80 = 120	300 - 210 = 90	470
Number of notebooks that were "Good"	50% of 240 = 120	37.5% of 400 = 150	25% of 80 = 20	40% of 210 = 84	374
Number of notebooks that were "Not Good"	240 - 120 = 120	400 - 150 = 250	80 - 20 = 60	210 - 84 = 126	556
Number of Practice books that were "Not Good"	12.5% of 160 = 20	40% of 100 = 40	60% of 120 = 72	30% of 90 = 27	159
Number of Practice books that were "Good"	160 - 20 = 140	100 - 40 = 60	120 - 72 = 48	90 - 27 = 63	311

Total number of Bengali language books that received "Good" feedback from the students = 120 + 140 = 260

Total number of Marathi language books that received "Good" feedback from the students = 150 + 60 = 210

Total number of Spanish language books that received "Good" feedback from the students = 20 + 48 = 68

Total number of English language books that received "Good" feedback from the students = 84 + 63 = 147

We can observe that only for Bengali language books, books have received "Good" feedback for at least 60% of the total books published in that language.
