Verbal Ability & Reading Comprehension

DPP: 1

Introduction to Verbal Ability; Best Summary of the Paragraph Question

Q1 Luck matters more in an absolute sense and hard work matters more in a relative sense. The absolute view considers your level of success compared to everyone else. What makes someone the best in the world in a particular domain? When viewed at this level, success is nearly always attributable to luck. Even if you make a good initial choice—like Bill Gates choosing to start a computer company—you can't understand all of the factors that cause world-class outcomes. As a general rule, the wilder the success, the more extreme and unlikely the circumstances that caused it. It's often a combination of the right genes, the right connections, the right timing, and a thousand other influences that nobody is wise enough to predict.

Which of the following best summarizes the perspectives on luck and hard work as discussed in the passage?

- (A) Luck plays a significant role in determining extreme success, while hard work contributes more to relative success compared to others.
- (B) Absolute success is primarily attributed to hard work, while relative success depends more on luck and favorable circumstances.
- (C) Neither hard work nor luck alone can account for success; only their balanced integration guarantees consistent achievement at any level.
- (D) The role of luck and hard work in success varies depending on the circumstances, with luck being more important in extreme cases

and hard work being more crucial in moderate situations.

Q2 Financial literacy is an essential component of community wealth building. By equipping individuals with the knowledge and skills to make informed financial decisions, education can help individuals build and accumulate wealth over time. By incorporating financial literacy education into school curricula and community programs, individuals can learn about budgeting, saving, investing, and other essential financial skills. This empowers them to make wise financial choices, avoid predatory lending practices, and build assets that contribute to long-term wealth accumulation. For example, consider a community that prioritizes financial literacy education. Residents in this community are educated about the importance of saving, investing, and building credit. As a result, they are more likely to make sound financial decisions, accumulate wealth, and be less vulnerable to financial crises or predatory financial practices. Which of the following best summarizes the passage?

- (A) Financial literacy education enables individuals to make informed financial decisions, contributing to long-term wealth accumulation and protection against predatory lending practices.
- (B) Financial literacy, when embedded within education systems and local initiatives, serves as a key enabler of sound decision-making and long-term wealth generation.

- (C) While budgeting and saving are essential financial skills, true community wealth requires systemic support beyond just educational efforts.
- (D) Communities that lack a culture of financial planning and education are inherently more prone to economic instability and poor financial choices.

Q3 One of the first metaphors that built the imagination of atomic energy was the story of the first mastery of fire, the ancient Greek myth of Prometheus. Through this narrative, the atomic explosion on 16 July 1945, known as the Trinity test, became another 'great moment in history'. At least, that is how the journalist William L Laurence, one of the few privileged witnesses to the nuclear test, described the explosion in an article for The New York Times in September 1945. For Laurence, the detonation marked the apogee of human civilization. But not everyone agreed with this evolutionary vision of history or this framing of the test as an exalted Prometheanism. For some, the new atomic age was far too radical and strange to simply be an extension of our past technological successes. **Which of the following best summarizes the central idea of the paragraph?**

- (A) The Trinity test was universally seen as a monumental moment in human technological advancement, symbolizing the success of scientific progress.
- (B) The metaphor of Prometheus was used by some, like journalist William Laurence, to frame the nuclear explosion as a grand milestone, though others found this interpretation overly simplistic and inadequate.
- (C) By invoking ancient myths like that of Prometheus, writers such as William Laurence portrayed the atomic age as a natural evolution of human ingenuity, though this view was revoked.
- (D)

The detonation of the first atomic bomb was controversial primarily because of the ethical concerns it raised about humanity's destructive capabilities.

Q4 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

Technologists want us to focus on loneliness, not depersonalisation. Of course, social media platforms like Facebook, Reddit or Instagram are a bundle of contradictions for people's relationships with friends and family, with plenty of implications for loneliness. The screens take us away from being fully present with people in our immediate environs, even as social media also enhances ties further afield. In fact, researchers say social media provides a form of 'social snacking', offering brief connections to other people that can help users tolerate a lack of 'real' (long-term or in-person) social interaction for longer. Particularly for lurkers and other passive users, social media contributes to both connecting and feeling disconnected, which explains the confusing fact that researchers report: social media use increases both satisfaction and dissatisfaction about one's relationships.

- (A) Despite offering superficial relief from loneliness through brief virtual contact, social media reshapes how users interpret presence and absence in relationships, creating a conflicted emotional experience.
- (B) While technologists focus on loneliness, the real issue lies in how social media deepens depersonalisation through passive digital engagement and disconnection.
- (C) Social media use creates a paradoxical state where users feel both more socially fulfilled and more isolated, especially among those who passively engage with others online.
- (D) Social media platforms complicate our emotional and relational experiences by offering temporary connections that

simultaneously alleviate and intensify feelings of loneliness.

Q5 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

The goal of the *merveilleux-scientifique* movement was simple: to help its readers better understand the contemporary world. Today, we take for granted that sci-fi can achieve this, but a century ago, this was far less clear. While Renard depicted the threats that may arise from the unknown, including sciences not yet mastered, his stories did not focus on hypothetical futures, as he underlines in his archives: 'I don't want to anticipate, I'd rather pretend to spill out, if I had the slightest pretension.' On the contrary, he engaged with his readers to offer them new tools to think about the world. As he explained in an unpublished letter sent to the critic Jacques Copeau, who had attacked his work.

- (A) Renard's *merveilleux-scientifique* aimed to help readers engage with the present, not predict the future, using science fiction as a reflective tool.
- (B) Unlike modern sci-fi, Renard's *merveilleux-scientifique* avoided future speculation and subtly tackled contemporary issues.
- (C) The *merveilleux-scientifique* movement set itself apart by rejecting futurism and defending past realities through scientific reasoning.
- (D) The *merveilleux-scientifique* genre responded to critics by using realistic science to depict imagined threats without projecting into the future.

Q6 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

Invisible light. What a concept! The invention of the telescope had proven that there are objects

too faint to be visible to the unaided human eye – but when their light is concentrated, they pop into view. The invention of the microscope had likewise demonstrated the existence of objects too small to be seen – but when they are magnified, they, too, pop into view. Herschel had revealed a more fundamental limitation of human perception. His 'thermometrical spectrum' indicated that some portion of reality is invisible to us not because it is lacking in quantity (size or intensity, say), but because of its essential quality. The scope of Herschel's intellectual breakthrough was all the more remarkable given the modesty of the technology that enabled it.

- (A) Herschel's modest experiment demonstrated that certain realities remain imperceptible not due to physical limitations but because their inherent properties lie outside the range of human sensory detection.
- (B) Herschel's discovery of invisible light extended the limits of scientific observation by showing that some aspects of reality are fundamentally inaccessible to human senses without technological assistance.
- (C) While telescopes and microscopes improved our view of existing phenomena, Herschel's thermometric spectrum revealed an entirely new realm of reality
- (D) The invention of simple tools like telescopes, microscopes, and thermometers enabled significant scientific breakthroughs, of which Herschel's identification of invisible light was one, despite the rudimentary nature of the tools.

Q7 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

How a patient responds to the psychoanalyst's art depends on their personal history; it will always be particular. But psychoanalysts must engage with a problem universal to their profession: how to set up their room, ready for

patients to come and to project and to fantasise. The British Psychoanalytic Society, divided into Freudians, Kleinians and Independents, does not offer any guidance on the matter. Clinicians are free to set up their rooms as they like, just as they come to their own accommodation with Freud's ideas, each finding their own space within the profession.

- (A) Psychoanalysts' consulting rooms reflect their personal tastes and theoretical views, turning the space into a unique expression of their historical identity within the profession
- (B) Despite the British Psychoanalytic Society's lack of rules on room setup, psychoanalysts focus on creating a space where patients can freely project and imagine
- (C) The consulting room's arrangement is influenced by the clinician's branch of psychoanalysis and their historical experiences.
- (D) Each psychoanalyst's consulting room shows how their personal history and theoretical approach combine to shape a space that supports the therapeutic process

Q8 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

Being a fan of a particular club can tell us about somebody's ethical commitments or values. The St Pauli fan is likely Left-wing; the Barcelona fan might be a Catalan nationalist – they might even become a Barcelona fan because the club is such a symbol of this nationalism. (We need to leave room, though, for fans who are fans of a club despite its sociopolitical characteristics!) This helps us understand the problems that arise for fans when those involved with the club they love do wrong. When fellow fans sing racist songs, they are sending a message that these values are those of the community. This message implicates those who identify with the community, even if they do not share these values. The implication

runs deeper when these songs go unchallenged, since putting up with them sends a further message that even fans who don't share these values are happy to tolerate sharing a stadium with people loudly expressing them.

- (A) Supporting a club can reflect an individual's ethical or political values, but when harmful behaviors go unchallenged within the fan community, it implicates all members.
- (B) Fans choose clubs based on sociopolitical alignment, and problematic behavior within the fan base can be perceived as a direct reflection of their core ethical identity.
- (C) Even when fans are uncomfortable with offensive behavior, their silence may mean implicit approval, blurring the line between individual values and group identity.
- (D) Responsibility for unethical behavior in fan spaces lies not only with those directly participating but also with passive attendees.

Q9 Directions: The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

Paragraph: Entanglement is a state where two particles become connected and share information, even at vast distances. A change in one entangled particle will immediately affect its partner. It's a critical phenomenon for quantum computing because it allows qubits to be correlated and act as a single system. This, in turn, lets us create algorithms that are impossible with classical computers. However, just moving photons back and forth between modules doesn't automatically create entanglement. To achieve that, one would need to specially prepare both the qubits and the photon, so that after being transferred, the modules shared a single photon.

- (A) Entanglement allows instantaneous information sharing between particles and underpins the promise of quantum computing, but current systems would need

an upgrade to perform this function effectively.

- (B) The potential of quantum computing lies in entanglement's ability to correlate qubits, though realizing this potential requires deliberate coordination of particles during transmission.
- (C) While entanglement enables quantum algorithms beyond classical reach, the failure of photon transfer to consistently produce it challenges its foundational reliability.
- (D) Entanglement, though theoretically promising for quantum computing, is limited in practice by the unpredictability of qubit-photon interaction in modular designs.

Q10 Directions: The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

A state is a sovereign administrative apparatus that governs a given territory, controlling entry to and exit from that territory, and possessing supreme power within that territory. What is, however, meant by a state having a specific identity such that the same people and territory could be ruled by different states at different times? States have markers of unique identity, such as names and flags. But states are also defined through their constitutions – not just technical matters of the organisation and division of powers, but the way in which states represent certain populations while expressing certain identities, values and goals, and distribute membership, rights and representation. States can cease to exist through a significant-enough change in any of these fundamental aspects of their particular identity: the territory and population they rule, but also their fundamental constitutional order or regime type.

- (A) The identity of a state is primarily derived from symbols such as names and flags, which distinguish it from other governing entities.
- (B)

While a state's authority lies in its control over territory and population, its unique identity is shaped by deeper constitutional values and representation mechanisms, making it possible for different states to rule the same people and land over time.

- (C) States may change in form and structure, but as long as they retain the same territory and population, their identity remains largely intact.
- (D) Constitutional orders and regime types are often unstable, making it difficult for states to maintain consistent governance over time.

Q11 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage

Humans are meaning-making creatures. Existentialists call the paradox of struggling to make meaning in a universe that has none 'the absurd'. Engaging fully in this struggle is sometimes itself the meaning. As the writer Albert Camus observes, in the Sisyphean task of rolling a rock up a hill only to have it roll back down, one can find an aliveness to the present moment, even a quiet joy. The hero's journey can be as simple as getting on with the day. Jean-Paul Sartre coined the term 'bad faith' to describe living as if one were not free, within the constraints of circumstance, to make meaningful choices. This can result in inauthenticity or a sense of victimhood and stuckness. In *Man's Search for Meaning* (1946), the Holocaust survivor Viktor Frankl wrote: '[E]verything can be taken from a man but one thing: the last of the human freedoms – to choose one's attitude in any given set of circumstances, to choose one's own way.'

- (A) Humans create meaning in an inherently meaningless world by fully embracing life's struggles, but failure to recognize personal freedom leads to victimhood and inauthenticity.

- (B) Despite the universe's absurdity, true meaning lies in rebellion against circumstance through active resistance; failure to do so results in despair and loss of freedom.
- (C) The human condition involves choosing attitudes within given constraints, and authentic living requires embracing absurd tasks, whereas bad faith traps individuals in passivity
- (D) The world, according to the existentialists, has no meaning. Yet, involving oneself with the struggle to make meaning in such a world can in itself bring meaning to one's life.

Q12 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage

Emotional contagion is thought to represent the foundation of human empathy. In his 'Russian doll' model, the primatologist Frans de Waal saw empathy as a richly layered process, a bit like a stacking doll or an onion. At the core of empathy sits emotional contagion – the automatic sharing of feelings – which combines with other cognitive and emotional skills to activate more complex, outer layers of empathy. With the combination of these abilities, rooted in an emotional core, a developing human can move from 'feeling with' the other toward 'feeling for' them, such as by comforting someone in distress or offering targeted help to someone in need. In other words, to show empathy for others' experiences and feelings, we first need to be able to feel what they feel.

- (A) Empathy develops as a multi-layered capacity, beginning with innate emotional contagion and evolving through cognitive refinement.
- (B) Emotional contagion is the instinctive core of empathy, enabling more complex empathetic responses.
- (C) The ability to offer meaningful support depends on the consciously evolution of

emotional contagion to enable higher reasoning.

- (D) Empathy involves both spontaneous emotional responses and deliberate actions, grounded in a cognitive-emotional system.

Q13 The passage given below is followed by four summaries. Choose the option that best captures the author's position.

Literary wives are a unique breed, writes Carmela Ciuraru in the introduction to her strange new book – at which point the reader pictures Vera Nabokov either licking Vladimir's stamps, or pulling the pages of an early draft of Lolita from the fire in which he was attempting to burn it. ("We are keeping this," she must have said.) but no sooner has the smoke faded than alarm bells start to ring. It's not true, is it, that statement of hers? And what's more, she must know it. The women in Lives of the Wives, all of them the long-suffering partners of writers, could not be more different from one another if they tried; each one, in fact, is what my late father would have described wryly as a breed apart.

- (A) Writers' wives are unique because they have a singular opportunity of tolerating the idiosyncrasies of their writer-husbands.
- (B) Despite the diversity in their backgrounds, wives of writers seem to suffer one way or other without exception.
- (C) Being a unique breed by themselves, wives of writers have to suffer a lot because of their husbands' profession.
- (D) The wives of writers, though diverse in their backgrounds, often share a unique experience of navigating the challenges posed by their husbands' literary pursuits.

Q14 This idea of a "following wind", a gust of privilege, gets to the heart of what we call the class ceiling. It neatly captures the propulsive power provided by an advantaged class background – how it acts as an energy-saving

device that allows some to get further with less effort – deftly shaping career trajectories, delineating what courses of action are possible, what kind of support is available, and how one’s “merits” are perceived by others. Equally, the metaphor also describes the experience of the upwardly mobile who, very often, have the wind against them. It is not that such individuals cannot move forward, or never reach the top; just that, generally, it takes longer, happens less frequently and often represents a markedly more labour-intensive, even exhausting experience.

Which of the following most accurately conveys the main idea of the passage?

- (A) The concept of a "following wind" represents the inherent ease with which individuals from privileged backgrounds navigate their careers, contrasting with the challenges faced by the upwardly mobile, who often struggle against systemic barriers.
- (B) The "class ceiling" metaphor refers to the societal limitations faced by the upwardly mobile, who, unlike those from advantaged backgrounds, often lack the support and opportunities to advance quickly, making it nearly impossible for them to reach the top.
- (C) The notion of a "following wind" reflects how career advancement is shaped by an individual's background, suggesting that those from privileged classes benefit from a form of social momentum, while others without this privilege face significantly more resistance in their career progression.
- (D) The "class ceiling" is a phenomenon that creates an insurmountable barrier for those from lower social classes, forcing them to work harder for fewer rewards, while individuals from privileged backgrounds experience effortless upward mobility due to societal biases.

Q15 Some in the space exploration community, including no less a figure than the physicist Freeman Dyson, say that human spaceflight is

folly in the short term. We humans are still in our technological infancy, after all, only a million years removed from the first control of fire. We have progressed quickly, from those first campfire sparks to the explosions we bottle in tall cylinders, to power our way out of Earth’s gravity well. But not everyone who sits atop our rockets returns safely. To seed a colony on another planet, we need astronaut safety to scale up. Perhaps we should park human missions for now, and explore space through the instruments of our cosmic drones, like the Voyager probe that recently slipped from the Solar System, to send us its impressions of interstellar space. We can resume human spaceflight later this century, or next, after we have reaped the full fruits of our current technological age. For all we know, revolutions in energy, artificial intelligence and materials science could be imminent. Any one of them would make human spaceflight a much easier affair.

Which of the following best encapsulates the author's viewpoint regarding the future of human space exploration?

- (A) Although technological progress has allowed humans to leave Earth's gravity, the lack of safe and reliable methods to ensure astronaut survival suggests that human space exploration should be indefinitely replaced by drone missions until significant technological breakthroughs occur.
- (B) While human space exploration has made notable strides, technological advancements in unmanned missions like the Voyager probe demonstrate that robotic exploration is a more efficient and safer alternative to risky human endeavors in space, with little need for immediate human presence.
- (C) The current limitations in astronaut safety, combined with the potential for imminent technological revolutions, imply that postponing human space exploration temporarily in favor of robotic missions is the most prudent course, while we await

breakthroughs in energy, materials science, or AI.

- (D) Human space exploration is inevitable, but until revolutionary advancements in technology make long-term human survival feasible in space, all exploration efforts should be limited to developing safer astronaut protocols while simultaneously conducting robotic missions.

Q16 Brain imaging produces a particularly clear picture of this interconnectedness. When people listen to music, no single 'music centre' lights up. Instead, a widely distributed network activates, including areas devoted to vision, motor control, emotion, speech, memory and planning. Far from revealing an isolated, music-specific area, the most sophisticated technology we have available to peer inside the brain suggests that listening to music calls on a broad range of faculties, testifying to how deeply its perception is interwoven with other aspects of human experience. Beyond just what we hear, what we see, what we expect, how we move, and the sum of our life experiences all contribute to how we experience music.

Which of the following most accurately summarizes the main idea of the passage?

- (A) Brain imaging shows that music activates a wide array of brain areas, emphasizing that music perception is shaped by a combination of auditory, visual, emotional, and motor processes, which are deeply interwoven with human experiences.
- (B) Listening to music engages various brain regions, revealing how interconnected our sensory and cognitive faculties are, though the precise role of each brain area in music perception remains uncertain.
- (C) Brain imaging has revealed that music perception involves not just auditory areas but also memory, movement, and emotion, showing that our experience of music is

influenced by both sensory input and our broader life experiences.

- (D) The perception of music, as shown by brain imaging, is not localized to a specific brain region but instead engages multiple faculties, suggesting that our expectations and memories heavily influence how we experience music

Q17 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

The current apocalypse is that streaming and Covid anxiety are conspiring to kill off moviegoing as we have known it, leaving a handful of I.P.-driven blockbusters and horror movies to keep theatres in business while we mostly sit at home bingeing docuseries, dystopias, and the occasional art-film guilt trip. Am I worried? Of course, I'm worried. The cultural space in which the movies I care most about have flourished seems to be shrinking. The audience necessary to sustain original and ambitious work is narcotized by algorithms or distracted by doomscrolling. The state of the movies is very bad.

- (A) Covid anxiety has encouraged streaming of various kinds of films.
- (B) The current scenario of movie watching is not conducive to movie industry.
- (C) Our worries about the decline of the movie industry seem to be well founded.
- (D) The algorithms used in streaming, disrupted movie industry beyond repair.

Q18 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

Though often treated as a universal constant, time is neither neutral nor uniform in human experience. Cultural frameworks shape how time is perceived, valued, and organised - from linear

progressions in industrial societies to cyclical rhythms in agrarian or ritualistic cultures. Even within a single society, temporal structures reflect underlying power dynamics: whose time is prioritised, whose is devalued, and who gets to dictate the pace. The standardisation of clocks and calendars has facilitated coordination but also imposed a singular rhythm on diverse ways of living. What appears as efficient scheduling may, in fact, be a subtle form of domination - where one temporal logic marginalises others not by force, but by framing itself as natural.

- (A) Standardised notions of time promote coordination but often suppress alternative cultural rhythms, reinforcing power hierarchies in subtle ways.
- (B) While time is commonly seen as a neutral measure, it conceals cultural and political influences that shape how it is used and whose rhythms are privileged.
- (C) Temporal diversity across cultures reveals the adaptability of human societies, though clock time remains essential for managing modern life.
- (D) Time, as a measurable entity, becomes meaningful only when applied to specific tasks or rituals, differing mainly in degree rather than in kind across societies.

Q19 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage

Faith is not about certainty. It is fundamentally a decision to trust your spiritual experiences, and to trust a certain framework for interpreting and acting upon those experiences. Hindus interpret their spiritual experiences as awareness of Ultimate Reality at the core of one's being, and respond by meditating to realise their identity with Ultimate Reality. Christians interpret their spiritual experiences as awareness of a loving creator, and pray to deepen their relationship with God. These decisions to trust certain

experiences influence how you see the world, how you respond to other people, and how you engage with nature. For a person of faith, each moment of daily life is permeated with meaning and significance. This openness to uncertainty allows for pluralism. If faith requires certainty, then people of faith must be certain that their religion is right, and hence certain that other religions are wrong. But for trust to be rational, it's only required that we're not putting our trust in something wildly improbable.

- (A) Faith is a decision to trust spiritual experiences and interpret them through a specific religious framework, allowing individuals to find meaning in everyday life, while openness to uncertainty enables pluralism.
- (B) Faith, grounded in spiritual experiences, involves trusting one's religion as the sole truth, but requires a level of rationality to avoid putting trust in improbable beliefs, fostering pluralism in the process.
- (C) The essence of faith lies in trusting spiritual experiences without requiring certainty, enabling different religions to coexist, as long as one's faith isn't placed in something highly improbable.
- (D) The practice of faith is about interpreting spiritual experiences through one's chosen religious beliefs, but to maintain rationality, it is necessary to remain open to uncertainty, ensuring that no religion can claim exclusive truth.

Q20 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage

Anthropologists have also described a few societies as being unfamiliar with witches altogether – at least at the time they were being investigated. Or they were familiar with witches but didn't feel particularly threatened by them, perhaps because they thought they were

sufficiently protected by counter-witchcraft magic or the security of benevolent gods. An example are the Tallensi of Ghana, in whose world view the anthropologist Meyer Fortes judged witchcraft to be 'remotely peripheral'. That is, the Tallensi do not, for the most part, believe that misfortune derives from the wickedness of other people but from the actions of just and all-powerful ancestors, so that illness and death are interpreted as rightful punishment for human wrongdoing.

- (A) Some societies, like the Tallensi of Ghana, believe that misfortune is caused by ancestral punishment rather than witchcraft, minimizing the role of witches in their worldview.
- (B) The Tallensi of Ghana do not fear witches because they believe that their ancestors, not witches, are responsible for punishment, which they accept as just.
- (C) Anthropologists have noted that certain societies, like the Tallensi of Ghana, either don't believe in witchcraft or view it as unimportant, attributing misfortune to other causes such as ancestral justice.
- (D) Many societies are unfamiliar with witchcraft or don't feel threatened by it, believing in the protective power of magic or ancestral justice, as seen in the worldview of the Tallensi of Ghana.

Q21 Like confession, therapy is not simply another form of chatting, as good as any other. It is a special zone of play, built for purpose – one that incorporates many of the best aspects of platonic love, but which is additionally bound by professional duty, specialized training, and uniform standards of conduct. When it comes to the dark night of the soul, all ears are not created equal. Reminders to be a better friend, gentler family member, or softer person are often welcome and will never be unwarranted. But let us not confuse this with the hard work required to address the very real mental health crisis to which such campaigns rightly call our attention.

Only then will we find out just how OK we can really be.

Which of the following best summarizes the main idea of the passage?

- (A) Therapy, unlike casual conversation, involves professional training and ethics, making it better equipped to handle serious mental health issues, while friendly advice, though useful, is insufficient for such challenges.
- (B) Therapy is a professional space, distinct from personal relationships, that involves specialized skills and is designed to address mental health crises, which personal support systems cannot fully manage.
- (C) Therapy, though sharing elements of personal support, is primarily a professional practice designed to handle deep mental health struggles, while casual relationships, though important, do not offer the same level of care.
- (D) Although personal support is valuable, professional therapy, with its formal standards, specialized training, and ethics, is necessary for dealing with serious mental health crises, unlike casual relationships.

Q22 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

The first step is seeing the asteroid theory's influence on our daily lives. That extra flight despite carbon concerns, the luxury purchase despite debt, the impulse buy that serves no real need. Take a breath and a rational moment – if you catch yourself doom spending, pause and ask: am I making this choice for my future, or because I've given up on it? "We are free to change our behaviour and make our lives and society better" We practise sophisticated risk management in our investment portfolios while embracing catastrophic risk in our energy systems, weapons arsenals and consumption patterns. What if we applied Markowitz's diversification logic to civilisation itself? This means building economic models that

acknowledge infinite growth on a finite planet is mathematically impossible. It means slowing down production of things nobody wants. It means policies that account for how people actually behave under existential anxiety, not how textbooks say they should behave.

- (A) Despite awareness of global risks, human behavior clings to unsustainable consumption patterns, necessitating rational change.
- (B) Society must apply financial risk management principles universally to halt environmental and economic decline caused by excess.
- (C) Catastrophic anxiety drives irrational choices that can only be corrected by limiting production of unnecessary goods.
- (D) Infinite economic growth is incompatible with reality, and policies must address existential fears influencing consumer behavior.

Q23 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

My therapist offered the theory of 'mentalisation' as a possible explanation: a psychological concept popularised by the Hungarian-born British psychoanalyst Peter Fonagy in the late 1980s that basically describes the capacity to attune to the mind of another and imagine their innermost thoughts and intentions. My therapist posited that maybe the medium was able to draw such an accurate portrayal of my boisterous mother because she was already so ever-present within the deepest parts of my being. My longing for her attention was, simply put, palpable to others. I felt myself parachuting down from the heights of cosmic connection to the harsh reality of my still-complicated grief. Landing here meant losing my mother all over again. I trust that my therapist had tried to demystify this experience as a psychological phenomenon to comfort me. But this reductive explanation for such a profound, mystical experience – and so soon after it happened – deeply upset me. Planting

this possibility left me feeling trapped: between the world of spirit and the world of reason.

- (A) The author struggles to reconcile a profound spiritual encounter with a rational, psychological interpretation offered by a therapist.
- (B) The therapist's explanation of mentalisation invalidates the mystical experience, highlighting the tension between grief and clinical reasoning.
- (C) The author experiences grief through mystical means, ultimately rejecting psychological interpretations as inadequate and reductive.
- (D) The medium's insight into the author's mother is explained by innate empathy, leaving the author caught between spirit and reason.

Q24 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage

...At least among the recording artists who have exploited the phonograph and its successors over the past hundred years or so—seems to match the course of an individual's reproductive life. In particular, Dr Miller studied jazz musicians. He found that their output rises rapidly after puberty, reaches its peak during young-adulthood, and then declines with age and the demands of parenthood. As is often the case with this sort of observation, it sounds unremarkable; obvious, even. But uniquely human activities associated with survival—cooking, say—do not show this pattern. People continue to cook at about the same rate from the moment that they have mastered the art until the moment they die or are too decrepit to continue. Moreover, the anecdotal evidence linking music to sexual success is strong. Dr Miller often cites the example of Jimi Hendrix, who had sex with hundreds of groupies during his brief life and, though he was legally unmarried, maintained two long-term liaisons. The words of

Robert Plant, the lead singer of Led Zeppelin, are also pertinent: "I was always on my way to love. Always. Whatever road I took, the car was heading for one of the greatest sexual encounters I've ever had."

- (A) Musical productivity follows a consistent output throughout an individual's life and little connection to sexual success.
- (B) The correlation between musical productivity and sexual success is largely anecdotal, with little scientific evidence to support the idea that sexual attraction drives artistic output.
- (C) The pattern of musical productivity among recording artists suggests that sexual motivation plays a significant role, with output peaking during periods of high sexual activity and declining with age, as observed in the lives of some artists.
- (D) Musical productivity peaks during young adulthood, declines with age and parenthood, and appears to be linked to sexual success, as observed in the lives of some artists.

Q25 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage

Capitalism always has a local tenor, for better and for worse. Singapore consistently tops lists of free-market societies on a range of metrics, but also has one of the largest provisions of state housing in the world. The US is a capitalist society with a denuded to non-existent safety net for the poor, but multiple quasi-socialist exemptions and subsidies for corporations and the rich. France is being led towards the unconscionable horror of neoliberal capitalism by President Macron, his critics say – though he has just nationalised EDF, the world's third biggest power company. Denmark is a model of tolerant, inclusive economic equality – but it does have a law against the existence of 'ghettos' which explicitly gives a lower level of rights to people from 'non-

Western' backgrounds. Capitalism shares principal ingredients, but it comes in as many different flavours as ice cream.

- (A) Capitalism, while fundamentally similar in its core principles, manifests in diverse ways across different countries, each blending free-market policies with unique local elements.
- (B) Despite being a globally dominant economic system, capitalism takes on varying forms depending on the cultural and political context of each nation, mixing free-market and state intervention in different ways.
- (C) Capitalism, though fundamentally similar in its principles, is universally applied in ways that prioritize free-market policies, often leading to the dominance of local elites and the marginalization of weaker segments in different countries.
- (D) While capitalism is a unified global system, it inevitably faces challenges in implementation, resulting in inconsistencies and contradictions within the same nation, especially in terms of social equity.

Q26 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage

In their native ranges, these multi-nest colonies can grow to a few hundred metres across, limited by physical barriers or other ant colonies. This turns the landscape to a patchwork of separate groups, with each chemically distinct society fighting or avoiding others at their borders. Species and colonies coexist, without any prevailing over the others. However, for the 'anonymous societies' of unicolonial ants, as they're known, transporting a small number of queens and workers to a new place can cause the relatively stable arrangement of groups to break down. As new nests are created, colonies bud and spread without ever drawing boundaries because workers treat all others of

their own kind as allies. What was once a patchwork of complex relationships becomes a simplified, and unified, social system. The relative genetic homogeneity of the small founder population, replicated across a growing network of nests, ensures that members of unicolonial species tolerate each other. Spared the cost of fighting one another, these ants can live in denser populations, spreading across the land as a plant might, and turning their energies to capturing food and competing with other species. Chemical badges keep unicolonial ant societies together, but also allow those societies to rapidly expand.

- (A) Multi-nest ant colonies remain distinct and territorial due to chemical differences, whereas unicolonial ants form unified social systems and expand rapidly without territorial boundaries.
- (B) Multi-nest colonies of ants are characterized by territorial boundaries and chemical distinctions, creating separate groups, while unicolonial ants expand and unify their social structure by treating all their kind as allies.
- (C) Multi-nest ant colonies are defined by their ability to spread across the landscape and compete with other species, whereas unicolonial ants have strict territorial limits and do not expand beyond their original range.
- (D) Multi-nest colonies of ants are separated by physical barriers and chemical differences, preventing their expansion, while unicolonial ants, despite their chemical badges, remain within specific areas and do not form large, unified groups.

Q27 We habitually associate literary realism with things like down-to-earth subject matter, plausible detail and convincing chronology. For the ancients, though, realism had just the opposite meaning. Aristotle argued that art should transcend the mass of incidental details around us and deal with the more important

reality of universals. On this view, art imitates reality not by directly copying things around us, but by somehow reflecting our broad experience of reality through its modes of representation. But in the wake of the empiricist philosophy and science of the 1600s and 1700s, this idea was turned on its head: what was 'realistic' was now the flux of particulars. This updated notion of realism found classic expression in the novel – novels that depicted particular people having particular experiences at particular times and places. For the literary theorist Mikhail Bakhtin, writing in the 1930s, the quintessential feature of the modern novel was 'heteroglossia': a riotous mixture of voices, characters and styles, which undermines the claim to authority of any one of them. And this opens up a tempting musical parallel.

Which of the following best summarizes the main idea of the paragraph?

- (A) The concept of realism has shifted to a modern emphasis on particular details and experiences, as seen in novels with heteroglossia.
- (B) Realism in literature evolved from focusing on universals in ancient times to depicting specific experiences, influenced by empiricist philosophy, and is exemplified by the heteroglossia in modern novels.
- (C) Literary realism changed from Aristotle's focus on universals to the depiction of specific particulars, a shift characterized by heteroglossia in novels.
- (D) From Aristotle's universals to the modern focus on particulars, the idea of realism evolved, with modern novels using heteroglossia to depict varied experiences.

Q28 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage. Kitsch is not merely art that is in poor taste; that is a simplistic definition. Its essence lies in its

function as a kind of emotional shortcut, a pre-digested feeling. It does not invite a complex, authentic emotional response from the viewer but instead provides a set of clear instructions on *what* to feel—be it sentimental pity, saccharine joy, or patriotic fervor. Kitsch operates by substituting the difficult process of genuine aesthetic engagement with the effortless consumption of a stock emotion. A painting of a crying clown, for instance, is not a profound exploration of sorrow; it is the *idea* of sorrow, packaged for immediate recognition. Thus, the primary failing of kitsch is not aesthetic, but ethical: it offers a comforting deception, relieving us of the burden of confronting reality with our own, unmediated feelings.

- (A) Kitsch functions as a deceptive emotional shortcut, and its primary failing stems from its substitution of authentic feeling with stock emotion.
- (B) The fundamental flaw of kitsch is its substitution of genuine, difficult emotional engagement with the effortless consumption of a pre-digested, stock feeling.
- (C) The essential problem of kitsch is that it deceives by replacing the demanding work of authentic feeling with a stock emotional response, shielding us from reality.
- (D) By offering a comforting deception that shields us from unmediated feelings, kitsch instructs its audience on what to feel, thereby becoming merely art in poor taste.

Q29 You know how politicians are always saying this is no time to engage in politics? Well, what *politics* is to politics, *tourist* is to tourism. And *touristy* has devolved from “of or relating to tourists” to “ignoble, tacky, cloying, ersatz.” For travel writers, *touristy* is the ultimate slander. Even *flea-ridden flophouse* seems less damning. We’re forever distinguishing between hip travelers and sheeplike tourists. We parse the world’s offerings into things tourists do versus things “locals” do as if the mere act of residing somewhere confers a

sense of style. For all the times I’ve indulged that facile distinction, I offer my apologies. Because frankly, this ridiculous fixation on what is and what isn’t “touristy”—and who is or isn’t a “tourist”—can ruin a vacation.

Which of the following best summarizes the main idea of the paragraph?

- (A) The author points out the negative connotation of the word “touristy” and highlights the absurdity of differentiating between tourists and locals, emphasizing that such distinctions can spoil a vacation.
- (B) The author argues that all travelers should strive to blend in with locals to avoid being seen as tacky tourists, as this fixation can spoil a vacation.
- (C) The author criticizes the distinction made between tourists and travelers, suggesting that it is an unnecessary and harmful fixation that can spoil a vacation.
- (D) The author believes that tourists should avoid popular tourist spots to prevent their vacations from being ruined by the tackiness associated with those places.

Q30 The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

To get ahead of potential defamation lawsuits, movies and TV shows remind their viewers of the fictional status of the work but, outside of those contexts, fiction is often invoked to mean something like ‘hearsay’, i.e., a claim that cannot be substantiated and therefore ought to be dismissed. If we’re asking about the nature of fiction, then we should do so with an eye towards producing an understanding of fiction that wouldn’t allow bad actors to lie and successfully evade punishment by insisting they were ‘only making fiction’, or dismiss unfavourable claims as ‘fiction’ as if they can be the final arbiter, or as if fiction can be peddled as fact without ramifications.

(A)

The line between fact and fiction is often blurred in public discourse, allowing fiction to be weaponised either to escape accountability or to silence opposing claims.

- (B) While disclaimers help prevent legal issues in media, the term 'fiction' is often misused more broadly to escape moral scrutiny or discredit allegations.

- (C) The idea of fiction must be redefined to prevent it from being used by bad actors as a defence mechanism against legal or moral consequences.

- (D) Fiction is frequently misunderstood as mere hearsay, and society must learn to differentiate between imaginative expression and factual misrepresentation.

Hints & Solutions

Note: scan the QR code to watch video solution

Q1 Text Solution:

The right answer is option A

Option A accurately summarizes the perspective presented in the passage. It highlights that extreme success is largely attributed to luck, as indicated by examples like Bill Gates' success in starting a computer company. On the other hand, hard work is emphasized as a factor contributing to relative success compared to others. This option effectively captures the contrast between the roles of luck and hard work in absolute and relative success.

Incorrect options

Option B incorrectly suggests that absolute success is primarily attributed to hard work, which contradicts the perspective presented in the passage that extreme success is mainly influenced by luck.

Option C is too general and vague, and doesn't reflect the distinction between relative and absolute success made in the passage.

Option D acknowledges the varying roles of luck and hard work depending on the circumstances, but it does not accurately reflect the emphasis on luck in extreme success and hard work in relative success, as discussed in the passage.

Video Solution:

Q2 Text Solution:

Explanation:

Option A (Correct):

This is the most comprehensive and direct summary of the passage. It accurately captures the core ideas:

Financial literacy → informed choices

Informed choices → wealth accumulation

Literacy prevents predatory lending and financial crises.

Option B (Incorrect):

This is very close and correctly mentions embedded education and sound decision-making, but it's slightly less specific than A—it misses key points like avoiding predatory practices and building credit, which are critical elements of the passage.

Option C (Incorrect):

This introduces a new idea—that systemic support beyond education is essential—which is not stated or implied in the passage. It shifts the focus from the positive outcomes of financial literacy to what it *lacks*, making it misaligned.

Option D (Incorrect):

Though partially true and indirectly supported, it emphasizes the consequences of lacking financial education, which is not the central theme. The passage is more about the benefits of financial literacy than the dangers of its absence.

Video Solution:

Q3 Text Solution:

Explanation

Correct Option:

Option B correctly captures the essence of the paragraph: it presents a balanced summary of two contrasting perspectives. On one side, journalist William L. Laurence used the Prometheus myth to glorify the Trinity test as a landmark of human progress. On the other side, others rejected this framing, finding it too simplistic or inadequate to capture the radical

[Android App](#) | [iOS App](#) | [PW Website](#)

nature of the atomic age. This contrast is central to the paragraph, making option B the best choice.

Explanation of Incorrect Options:

Option A is factually incorrect based on the paragraph. The author explicitly states, “*not everyone agreed with this evolutionary vision.*” By using the word “universally”, option A falsely assumes complete consensus and ignores the dissenting voices, thus oversimplifying the text.

Option C is a tricky but flawed option. While it begins correctly by mentioning the Prometheus myth and Laurence’s perspective, it uses the word “revoked”, which is inappropriate and misleading. The view wasn’t revoked; others simply disagreed with it. This makes C factually inaccurate in subtle ways, which is why it’s incorrect.

Option D introduces an idea not present in the paragraph. The paragraph doesn’t discuss ethics or destructive capabilities; instead, it focuses on symbolic interpretations (myth of Prometheus vs. alternate views). Thus, D is off-topic and cannot be the correct summary.

Video Solution:

Q4 Text Solution:

Correct Answer: D

Explanation:

D. Correct – This summary accurately captures the paradox discussed in the passage: that social media helps and harms at the same time — it alleviates loneliness by enabling connection but also highlights disconnection. It incorporates the emotional duality and complexity of user experience.

A. Incorrect – This option adds interpretation about how users “reinterpret presence and

absence,” which is not directly stated or implied in the passage. It’s clever wording, but it shifts from the actual content — which centers more on how social media both connects and alienates simultaneously, especially for passive users

B. Incorrect – Though this sounds plausible, it misrepresents the author’s emphasis. The passage does not argue that depersonalisation is the core issue; in fact, it highlights that technologists distract from it. The focus remains on loneliness and mixed emotional outcomes.

C. Incorrect – This option slightly overstates the sense of “social fulfillment” and misses the passage’s stress on temporary, shallow forms of connection. It also lacks the broader framing of the contradictory emotional response (not just fulfillment vs. isolation).

Video Solution:

Q5 Text Solution:

Answer & Explanation:

Correct Answer: A

Explanation:

Option A clearly captures the central contrast of the passage: Renard’s use of science fiction to reflect on the present, not anticipate the future. It aligns with his intent to equip readers with tools to understand reality, not escape into speculation.

Option B:

Though close, the idea of Renard tackling issues “subtly” or “unlike modern sci-fi” isn’t supported directly by the passage. The emphasis is on reader engagement and clarity, not subtlety or opposition.

Option C:

Incorrectly frames the movement as focused on the past and defensive in nature. The passage

focuses on the present, not defending past realities.

Option D:

Implies that the genre's main function was to respond to criticism and depict realism, which misrepresents Renard's proactive aim of offering new ways of thinking about current issues.

Video Solution:

Q6 Text Solution:

Option A

This is the best summary because it precisely captures the central message of the passage: Herschel's discovery went beyond revealing faint or small phenomena—it uncovered that some parts of reality are invisible not due to lack of size or intensity, but due to their qualitative nature being outside human perception. It also acknowledges the modest tools used, which aligns with the passage's final sentence.

Option B

While partially accurate, this option subtly misplaces the emphasis. It suggests that the limitation is due to a lack of technology and that with the right tools, perception is fully restored. However, the passage makes a deeper point—that some phenomena are inaccessible not just without tools, but because of their essential, invisible nature, regardless of magnification or focus.

Option C

This summary is too dramatic and overstates Herschel's discovery. The phrase "entirely new realm" suggests a shift on par with discovering a new universe, which the passage doesn't claim. The passage's focus is on changing our understanding of perception, not uncovering a wholly different dimension of reality.

Option D

This option misses the main idea. It reduces the passage to a general comment on scientific tools and their effects, grouping Herschel with other inventions like telescopes and microscopes. But Herschel's contribution, as per the passage, was conceptually unique—it revealed a qualitative blind spot in human perception, not just another use of improved instrumentation.

Video Solution:

Q7 Text Solution:

Explanation:

Option A:

"Psychoanalysts' consulting rooms reflect their personal tastes and theoretical views, turning the space into a unique expression of their historical identity within the profession."

This option captures the individuality of each psychoanalyst's room, linking it to their theoretical preferences and history. However, the phrase "historical identity" is slightly misleading—while the passage mentions personal history, it does not emphasize identity as a professional legacy or collective historical narrative. It also ignores the shared, universal challenge faced by psychoanalysts when setting up their rooms.

Option B:

"Despite the British Psychoanalytic Society's lack of rules on room setup, psychoanalysts focus on creating a space where patients can freely project and imagine."

This option highlights the Society's hands-off approach and the role of the room in enabling projection and fantasy for the patient. However, it overlooks the psychoanalyst's own personal history and theoretical stance, which the passage emphasizes as crucial in shaping the space. It

reduces the focus to patient experience rather than the dual subjectivity involved.

Option C:

“The consulting room’s arrangement is influenced by the clinician’s branch of psychoanalysis and their historical experiences.”

This choice incorrectly suggests that the consulting room setup is determined by the psychoanalyst’s theoretical school (Freudian, Kleinian, or Independent). The passage clearly states that no guidance is provided by the British Psychoanalytic Society, and clinicians find their own accommodation with Freud’s ideas—making this option factually inaccurate.

Option D (Correct):

“Each psychoanalyst’s consulting room shows how their personal history and theoretical approach combine to shape a space that supports the therapeutic process.”

This option accurately reflects the core of the passage. It captures both the universal nature of the challenge (all analysts must create a space) and the personal aspect (shaped by individual history and theoretical orientation), while also pointing to the goal of the space—supporting psychoanalytic therapy through projection and fantasy.

Video Solution:

Q8 Text Solution:

Explanation

Option A (Correct)

This option accurately summarizes both key components of the passage: (1) that being a fan can reflect one’s sociopolitical or ethical values, and (2) that harmful behaviors like racist chants, when unchallenged, implicate the broader fan

community. It reflects the author’s concern about moral association and passive complicity, making this the most balanced and comprehensive summary.

Option B

This is close, but slightly overstates the determinism of fandom choices by implying fans choose clubs solely or primarily based on political alignment. The passage explicitly cautions against this overgeneralization (“We need to leave room, though, for fans who are fans of a club despite its sociopolitical characteristics!”). So while this option is partially accurate, it fails to reflect the nuance about fans who support clubs *despite* their ideology.

Option C

This option captures the idea that silence = perceived approval, which is central to the passage. However, it focuses a bit too narrowly on the interpretation of silence and doesn’t emphasize the moral implication for the entire community of fans as clearly as A does. It also lacks the explicit connection between a club’s fanbase and sociopolitical & ethical commitment

Option D

This one also reflects a key idea from the passage: that passive attendees share responsibility. However, it frames the point too bluntly and assumes direct *moral responsibility* for all fans, without acknowledging the nuance the passage offers (e.g., that some fans may not share the problematic values but are still implicated through silence). It’s accurate but lacks the balance in tone that the passage maintains.

Video Solution:

Q9 Text Solution:

The correct answer is **B**) because it captures both the **promise and the condition** that defines the paragraph. The passage emphasizes that *entanglement* is crucial for quantum computing as it allows “qubits to be correlated and act as a single system,” enabling algorithms “impossible with classical computers.” But it also clearly states that this doesn’t happen by default — “just moving photons back and forth... doesn’t automatically create entanglement.” For that, a “**specifically prepared**” setup is required. Option B reflects this dual message — it acknowledges entanglement’s potential **and** the need for “deliberate coordination” to realize it. Options A, C, and D, while tempting, distort the core idea. A wrongly introduces the idea of “system upgrades,” which the passage never mentions. C exaggerates by calling the process a “failure” and questioning “foundational reliability,” which goes beyond the scope of the paragraph. D incorrectly frames the issue as “unpredictability,” whereas the passage actually describes a **lack of preparation**, not randomness. Hence, only B stays faithful to both the **technical content** and the **tone** of the original.

Video Solution:

Q10 Text Solution:

The correct answer is **B**.

The passage starts by defining a state as something that controls a territory and people. But then it dives deeper, asking what makes a **specific state identity** — how the “**same people and territory could be ruled by different states**” at different times. It says that while symbols like names and flags exist, what truly defines a state’s identity is its “**constitution**,” including not just legal structure, but also its

values, goals, and how it represents people.

Option **B** gets this exactly right — it acknowledges both the territorial control and the deeper identity rooted in **constitutional values and representation mechanisms**. It also reflects the idea that identity isn’t fixed to land alone, but can **change with the nature of the state**. The other options either oversimplify (A), directly contradict the passage (C), or focus on an unrelated point (D).

Video Solution:

Q11 Text Solution:

Explanation

Option A

"Humans create meaning in an inherently meaningless world by fully embracing life's struggles, but failure to recognize personal freedom leads to victimhood and inauthenticity."

This option captures some central themes — notably the absurdity of life and the need for humans to embrace struggle to find meaning. It also refers to Sartre’s idea of “bad faith” where one denies personal freedom. However, the summary focuses too heavily on the consequence of ignoring freedom (victimhood and inauthenticity) and does not emphasize the positive aspect of choosing one’s attitude, as Viktor Frankl and Camus suggest. It feels incomplete and tilted toward the negative consequences rather than the potential for meaningful engagement.

Option B

"Despite the universe's absurdity, true meaning lies in rebellion against circumstance through active resistance; failure to do so results in despair and loss of freedom."

[Android App](#) | [iOS App](#) | [PW Website](#)

This version misrepresents the tone and message of the passage. While the passage does address existential struggle and choice, it does not promote “active resistance” or “rebellion” as the only path to meaning. Camus’s idea is more about acceptance and mindful engagement than resistance. The framing of “despair and loss of freedom” also distorts Frankl’s idea, which is rooted in resilience and hope, not rebellion. This option makes the message sound more aggressive and political than existential and philosophical.

Option C

"The human condition involves choosing attitudes within given constraints, and authentic living requires embracing absurd tasks, whereas bad faith traps individuals in passivity."

This option is partially accurate. It touches on Sartre’s notion of bad faith and the idea of choosing one’s attitude within constraints, which aligns with Frankl’s message. However, it describes the struggle as “embracing absurd tasks,” which makes Camus’s metaphor seem trivial or menial. Moreover, it leaves out the emotional insight — the “quiet joy” and “aliveness” that Camus suggests. So while technically correct in parts, this summary lacks the depth and humanism of the original passage.

Option D

"The world, according to the existentialists, has no meaning. Yet, involving oneself with the struggle to make meaning in such a world can in itself bring meaning to one’s life."

This is the most concise and philosophically faithful summary. It captures the central paradox of existentialism — that while the universe lacks inherent meaning, humans can still live meaningfully by embracing the struggle to make sense of it. It subtly reflects Camus’s notion of quiet joy in the absurd (through “involving oneself in the struggle”) and maintains the reflective and non-judgmental tone of the passage. Although it doesn’t explicitly mention

Sartre’s or Frankl’s contributions, it encapsulates their shared existential message. Its clarity, coherence, and accuracy make it the best overall summary.

Video Solution:

Q12 Text Solution:

Explanation

Correct Answer: Option A.

Empathy develops as a multi-layered capacity, beginning with innate emotional contagion and evolving through cognitive refinement.

This option best summarizes the core idea of the passage. The passage introduces the "Russian doll" model, describing empathy as a layered process. It begins with emotional contagion and builds outward through cognitive and emotional development, allowing for more advanced expressions of empathy. The phrasing "multi-layered capacity" and "evolving through cognitive refinement" accurately captures both structure and progression.

Option B:

Emotional contagion is the instinctive core of empathy, enabling more complex empathetic responses.

This is partially correct, as it captures the starting point of empathy — emotional contagion. However, it misses the broader developmental layering and doesn’t fully reflect the idea of empathy evolving into acts like comforting or targeted help. It’s a good detail, but not a complete summary.

Option C:

The ability to offer meaningful support depends on the consciously evolution of emotional contagion to enable higher reasoning.

This option is grammatically awkward

("consciously evolution" is incorrect — it should be "conscious evolution") and also misrepresents the process. The passage describes emotional contagion as automatic, not consciously evolved. While higher reasoning is involved later, it's not framed as a transformation of contagion through conscious effort.

Option D:

Empathy involves both spontaneous emotional responses and deliberate actions, grounded in a cognitive-emotional system.

This is close, as it captures the dual nature of empathy (emotional and cognitive). However, it misses the progressive, layered development described in the "Russian doll" model. It also sounds more like a structural description than a true summary of the passage's main message.

Video Solution:

Q13 Text Solution:

Explanation

Option A:

This misrepresents the passage by treating the wives' suffering as a "singular opportunity," which sounds positive or privileged. It also oversimplifies their challenges and ignores the author's criticism of such generalizations.

Option B:

While it rightly notes diversity and shared suffering, the phrase "without exception" is too absolute. The author questions such sweeping claims and emphasizes the individuality of each woman.

Option C:

This repeats the very generalization the author critiques — calling them a "unique breed." It also blames the husbands' profession too directly, oversimplifying the nuanced struggles described.

Option D (Correct):

This best reflects the author's view: the women are diverse yet share a unique, often difficult experience linked to their husbands' literary lives. It avoids overgeneralization and matches the passage's tone.

Video Solution:

Q14 Text Solution:

Correct Option: A

Explanations:

Option A (Correct): This option accurately conveys the passage's central idea. It synthesizes both the metaphor of the "following wind" (the inherent ease of the privileged) and the reality of the "class ceiling" mentioned in the first sentence (the systemic barriers faced by the upwardly mobile). It maintains the passage's balanced tone without relying on extreme absolutes.

Option B: Incorrect. This option exaggerates the struggle by claiming it is "nearly impossible" for the upwardly mobile to reach the top. The passage explicitly states that these individuals can and do reach the top, but it requires much more effort.

Option C: Incorrect. While this option effectively summarizes the physical metaphor (momentum vs. resistance), Option A provides a stronger summary of the sociological reality the passage is discussing by explicitly acknowledging the systemic nature of the class ceiling.

Option D: Incorrect. It describes the class ceiling as an "insurmountable barrier," which directly contradicts the passage's claim that upwardly mobile individuals can still move forward. It also overstates the ease of the privileged by calling their mobility completely effortless, whereas the passage merely says it takes less effort.

Video Solution:**Q15 Text Solution:****Option A:**

Although technological progress has allowed humans to leave Earth's gravity, the lack of safe and reliable methods to ensure astronaut survival suggests that human space exploration should be indefinitely replaced by drone missions until significant technological breakthroughs occur.

- **Why it's tempting:** It captures the idea that current space travel is dangerous and suggests waiting for technological breakthroughs.
- **Why it's wrong:** The passage suggests a temporary pause, not an indefinite replacement of human missions by robotic ones. It does not advocate for a complete cessation of human exploration but rather a cautious delay.

Option B:

While human space exploration has made notable strides, technological advancements in unmanned missions like the Voyager probe demonstrate that robotic exploration is a more efficient and safer alternative to risky human endeavors in space, with little need for immediate human presence.

- **Why it's tempting:** It reflects the efficiency and safety of robotic exploration.
- **Why it's wrong:** This option implies that there is "little need for immediate human presence" at all, which is not the author's point. The passage does not dismiss the need for human exploration but emphasizes a delay until advancements are made, rather than

suggesting robotic missions are the permanent solution.

Option C (Correct Answer):

The current limitations in astronaut safety, combined with the potential for imminent technological revolutions, imply that postponing human space exploration temporarily in favor of robotic missions is the most prudent course, while we await breakthroughs in energy, materials science, or AI.

- **Why it's correct:** This option accurately captures the passage's recommendation to temporarily delay human spaceflight due to safety concerns and the anticipation of future technological breakthroughs. It combines the acknowledgment of current risks with a forward-looking view of technology.

Option D:

Human space exploration is inevitable, but until revolutionary advancements in technology make long-term human survival feasible in space, all exploration efforts should be limited to developing safer astronaut protocols while simultaneously conducting robotic missions.

- **Why it's tempting:** It suggests balancing robotic missions with preparation for human spaceflight and emphasizes astronaut safety.
- **Why it's wrong:** The passage doesn't emphasize limiting exploration to developing astronaut protocols but rather suggests postponing human missions altogether for now. This option makes the balance seem more equal, whereas the passage focuses more on robotic missions for the time being.

Conclusion:

Option **C** is the correct answer because it aligns with the passage's view of temporarily postponing human space exploration until technology progresses. The other options either overstate the need for indefinite delays or suggest that robotic missions are a complete

alternative to human exploration, which is not the passage's argument.

Video Solution:

Q16 Text Solution:

Explanation:

A) This option provides an accurate summary, highlighting the broad network of brain areas involved in music perception and emphasizing how interconnected these processes are with various human experiences. However, it is somewhat too general by not focusing on how broader life experiences contribute to the music perception. **Incorrect.**

B) This option introduces ambiguity by suggesting uncertainty about the role of each brain area, which is not supported by the passage. It also fails to fully capture the emphasis on how various life experiences contribute to music perception. **Incorrect.**

C) This option accurately captures the central idea of the passage by addressing the involvement of multiple brain regions, such as memory and emotion, and the role of sensory input alongside broader life experiences in shaping music perception. It correctly reflects the passage's argument. **Correct.**

D) While this option focuses on the idea that no single brain area is responsible for music perception, it overemphasizes the role of expectations and memories, without giving enough attention to the sensory and motor processes discussed in the passage. **Incorrect.**

Video Solution:

Q17 Text Solution:

To identify the correct option for this summary question, we need to understand the author's overall argument. He argues that because of streaming and Covid anxiety, moviegoing has radically changed. Except for a few films, most are doing badly, and the state of the movie industry is very bad. We should look at the options with this information in mind.

Option A: incorrect because the causal relation, while it might be true, is not what the author has focused on.

Option B: Correct because this option captures the essence of the passage.

Option C: incorrect. Although the paragraph mentions the author's worries regarding the movie-watching scenario, its primary focus is to highlight the criticality of the scenario and not the general worry of the public (only the author's worry has been mentioned).

Option D: incorrect because the disruption is not because of algorithms alone. It also does not mention that the industry is beyond repair. This makes the the option extreme.

Thus, the correct option is Option B

Video Solution:

Q18 Text Solution:

Option B accurately reflects the central concern of the passage - that while time is conventionally treated as neutral and objective, it is deeply shaped by cultural and political forces that

determine whose temporal frameworks are legitimised and whose are sidelined. The passage critiques the invisible dominance of standardised time and highlights how it privileges certain social rhythms, which this option captures fully and precisely.

Incorrect Options:

Option A highlights the suppression of cultural rhythms and its link to power, aligning closely with the passage, but gives slightly less emphasis to the perception of time as natural and neutral, which is the deeper critique the passage builds toward.

Option C frames temporal diversity as a matter of adaptability, and while it acknowledges multiple cultural rhythms, it softens the power critique by celebrating clock time as necessary, which the passage subtly challenges.

Option D focuses on the functional application of time to tasks or rituals, which misrepresents the passage's abstract concern with how time itself is constructed and imposed, not just how it is used.

Video Solution:

Q19 Text Solution:

Explanation:

A)

This option captures the essence of the passage by addressing both the individual decision to trust spiritual experiences and the pluralism fostered by openness to uncertainty. It touches on how faith influences daily life and how uncertainty prevents exclusivity in religious beliefs. This makes it an accurate and balanced summary of the passage's key ideas.

B)

This option suggests that faith involves believing

one's religion is the sole truth, which contradicts the passage's emphasis on openness to uncertainty. It also focuses too heavily on avoiding "improbable beliefs" as the basis of pluralism, which is a secondary aspect of the passage rather than the main argument.

C)

This option provides a generally accurate summary but introduces the idea that different religions can coexist only if one's faith isn't placed in something improbable. While the passage mentions improbability, it doesn't present this as the key factor in enabling pluralism, making this option slightly off-target.

D)

This option suggests that maintaining rationality in faith means no religion can claim exclusive truth, which overstates the passage's point. The passage promotes uncertainty and pluralism but doesn't explicitly argue that faith necessarily denies exclusive truth claims, making this option too assertive.

Conclusion:

Option **A** is the definitive answer, as it captures the role of trust in faith and the pluralism that stems from openness to uncertainty, without overstating or misinterpreting the passage's central ideas.

Video Solution:

Q20 Text Solution:

Explanation

Option A

"Some societies, like the Tallensi of Ghana, believe that misfortune is caused by ancestral punishment rather than witchcraft, minimizing the role of witches in their worldview."

This option highlights the Tallensi example

correctly, emphasizing their belief in ancestral punishment rather than witchcraft. However, the passage began with a broader anthropological point — that some societies either don't know witches at all or don't feel threatened by them. By focusing exclusively on the Tallensi, this option ignores the larger context and therefore gives only a partial summary, not the full essence of the passage.

Option B

"The Tallensi of Ghana do not fear witches because they believe that their ancestors, not witches, are responsible for punishment, which they accept as just."

This option goes into even narrower detail about the Tallensi. While it is factually consistent with the example given in the passage, it completely misses the anthropologists' general observation about societies unfamiliar with or unconcerned about witches. Since a summary must capture the entire passage, not just an illustration, this option is too specific and incomplete.

Option C

"Anthropologists have noted that certain societies, like the Tallensi of Ghana, either don't believe in witchcraft or view it as unimportant, attributing misfortune to other causes such as ancestral justice."

This option balances the general point with the specific example. It begins with the anthropologists' broader finding about societies and their varied relationships with witchcraft, then uses the Tallensi as an illustration. It captures both dimensions — general claim + specific example — in a concise manner. This makes it the most accurate and comprehensive summary of the passage.

Option D

"Many societies are unfamiliar with witchcraft or don't feel threatened by it, believing in the protective power of magic or ancestral justice, as seen in the worldview of the Tallensi of Ghana."

This option is close to being correct, as it mentions both the general point and the Tallensi

example. However, it has two problems: first, it says "many societies," which is an exaggeration since the passage clearly said "a few societies." Second, it conflates two different explanations — protection by magic/gods (general case) and ancestral punishment (Tallensi case) — as if they were the same. This subtle distortion makes it less precise than Option C.

Video Solution:

Q21 Text Solution:

Passage Breakdown:

The passage contrasts **therapy** with **casual personal support**. It emphasizes that while personal reminders and friendly advice to be a better person are always welcome, they are not a substitute for the professional, structured nature of therapy. Therapy is described as a "special zone of play" — a space where professional ethics, specialized training, and uniform standards of conduct are essential for addressing serious mental health issues, often referred to as the "dark night of the soul." This suggests that while casual support (from friends or family) can be beneficial, it doesn't offer the same depth of care required for addressing profound mental health crises.

Option Analysis:

A) Therapy, unlike casual conversation, involves professional training and ethics, making it better equipped to handle serious mental health issues, while friendly advice, though useful, is insufficient for such challenges.

- **Strengths:** This option correctly points out that therapy is distinct from casual conversation and highlights the need for professional training and ethics. It also

mentions that friendly advice is insufficient for serious mental health challenges.

- **Weaknesses:** The focus here is too much on "friendly advice," which was not the passage's central point. The passage does not pit therapy against casual conversation as its main argument. It emphasizes that therapy is fundamentally different from personal advice, not just that it's better equipped. This option also oversimplifies the passage's message, as it doesn't fully touch upon therapy being a structured, professional practice or the comparison to "platonic love" mentioned in the passage.

B) Therapy is a professional space, distinct from personal relationships, that involves specialized skills and is designed to address mental health crises, which personal support systems cannot fully manage.

- **Strengths:** This option recognizes that therapy is a professional space distinct from personal relationships, and it mentions the idea that therapy deals with mental health crises, which personal support systems cannot manage.
- **Weaknesses:** While this is a strong option, it misses some of the more philosophical aspects of the passage. Specifically, the passage talks about therapy incorporating "many of the best aspects of platonic love" and being a distinct zone, which is more than just professionalism versus personal support. The passage also highlights that therapy requires professional duty and ethics, something this option does not emphasize enough. It also does not clearly differentiate the importance of therapy over casual relationships as starkly as Option D does.

C) Therapy, though sharing elements of personal support, is primarily a professional practice designed to handle deep mental health struggles, while casual relationships, though important, do not offer the same level of care.

- **Strengths:** This option correctly acknowledges that therapy is designed to handle deep mental health struggles and contrasts it with casual relationships.
- **Weaknesses:** It dilutes the emphasis on the professional aspect of therapy by focusing too much on "personal support" and "casual relationships," making it appear as if the two are almost equally important, which is not the message of the passage. The passage stresses the distinction and superiority of therapy in addressing crises, while personal support is described as helpful but inadequate for these challenges. Also, this option doesn't emphasize the idea of "professional duty, specialized training, and uniform standards of conduct" as the key reasons why therapy is superior for handling mental health issues.

D) Although personal support is valuable, professional therapy, with its formal standards, specialized training, and ethics, is necessary for dealing with serious mental health crises, unlike casual relationships.

- **Strengths:** This is the **definitively correct** option because it encapsulates the core message of the passage. It balances the idea that personal support is valuable but not sufficient for addressing serious mental health crises. The option highlights that therapy's formal standards, specialized training, and ethics make it the necessary solution for handling profound psychological issues, which personal relationships cannot do.
- **Why it's correct:** This option includes everything the passage discusses: the **professionalism** of therapy, the **inadequacy of personal support** in addressing serious issues, and the focus on mental health crises. It also acknowledges the comparison to personal relationships, but it prioritizes therapy's professional structure and purpose, as described in the passage. The phrase "necessary for dealing with serious mental

health crises" aligns perfectly with the emphasis in the passage on the "very real mental health crisis" that requires more than personal support.

Conclusion:

Option D is the only answer that brings together all the critical elements of the passage:

- **Therapy's distinct professional nature**, with its "professional duty, specialized training, and uniform standards of conduct."
- **Personal support is valuable** but insufficient for addressing deep mental health issues.
- **Therapy's necessity** in dealing with serious mental health crises.

Options A, B, and C are all strong in different aspects but fall short of fully capturing the depth of the passage. They either oversimplify or miss key philosophical points, while **D** strikes the right balance, making it the definitively correct answer.

Video Solution:

Q22 Text Solution:

Correct answer: A. The passage emphasizes that even when people are aware of global or existential risks, they continue engaging in unsustainable, often impulsive consumption. It advocates for a conscious, rational pause to align behavior with long-term interests. A captures this central idea concisely, balancing the recognition of risk, human behavior, and the need for change.

B is incorrect because, while the passage references applying financial risk management concepts broadly, it does not insist that this alone "halts environmental and economic decline." The trap is overemphasizing the technical prescription. A is better because it captures the

broader behavioral and societal insight rather than a narrow financial analogy.

C is incorrect because it isolates the impulse of "doom spending" or catastrophic anxiety as the sole driver, ignoring the passage's broader critique of human behavior and unsustainable consumption patterns. The trap is narrowing the scope to psychological cause alone. A is better because it encompasses both awareness of risk and the persistent behavior requiring rational change.

D is incorrect because it emphasizes the incompatibility of infinite growth and the role of existential fear but misses the central behavioral call to consciously change habits. The trap is over-prioritizing economic theory over human action. A is better because it integrates awareness, behavior, and the necessity of rational change into one coherent summary.

Video Solution:

Q23 Text Solution:

Correct answer: A. The passage highlights the author's internal conflict between a mystical experience with the medium and the rational explanation of mentalisation offered by the therapist. The central idea is the struggle to reconcile emotional, spiritual intensity with reasoned psychological interpretation. A captures this nuanced tension without overstating judgment or resolution.

B is incorrect because it exaggerates the therapist's role as invalidating the mystical encounter. The passage describes the author's emotional upset, not outright dismissal. The trap is equating discomfort with invalidation. A is better because it emphasizes the internal

struggle and reconciliation challenge rather than assigning blame or denial.

C is incorrect because it claims the author ultimately rejects psychological interpretations. In reality, the author is unsettled and ambivalent, feeling trapped between spirit and reason. The trap is mistaking emotional frustration for outright rejection. A is better because it captures nuanced tension without assuming a final judgment.

D is incorrect because it centers the medium's insight and innate empathy as the core issue, rather than the author's emotional and cognitive struggle. The trap is misplacing focus on causality rather than experience. A is better because it foregrounds the author's reconciliation challenge, which is the paragraph's true essence.

Q24 Text Solution:

Passage Summary:

The passage discusses Dr. Miller's study on the relationship between musical productivity and sexual success. It observes that musical output among recording artists peaks during young adulthood and declines with age, unlike other human activities such as cooking, which remain consistent. The passage also notes anecdotal evidence suggesting a link between musical productivity and sexual success, exemplified by musicians like Jimi Hendrix and Robert Plant.

Evaluation of Answer Choices:

Option A:

Explanation: This option suggests that musical productivity follows a consistent pattern like other survival-related activities and implies there is little connection to sexual success.

Evaluation: This option is incorrect because it misrepresents the passage. The passage highlights that musical productivity has a unique pattern, unlike other survival activities, and implies a significant connection to sexual success.

Why It's Wrong: It downplays the connection to sexual success and inaccurately portrays the pattern of musical productivity.

Option B:

Explanation: This option emphasizes the anecdotal nature of the link between musical productivity and sexual success, suggesting there is little scientific evidence to support it.

Evaluation: While the passage does mention anecdotal evidence, it also discusses observed patterns in musical productivity. Therefore, this option is incomplete and does not fully capture the passage's main points.

Why It's Wrong: It overlooks the broader pattern discussed in the passage and focuses too much on the anecdotal aspect.

Option C:

Explanation: This option suggests that sexual motivation is a significant factor influencing musical productivity, with output peaking during periods of high sexual activity and declining with age.

Evaluation: This option captures the sexual aspect of the passage but misinterprets the broader context. It overstates the role of sexual motivation, making it misleading.

Why It's Wrong: It introduces a misleading interpretation by emphasizing sexual motivation as the primary factor, which is not fully supported by the passage.

Option D:

Explanation: This option accurately summarizes the passage, noting that musical productivity peaks during young adulthood, declines with age, and is linked to sexual success, with examples like Jimi Hendrix and Robert Plant provided to support this connection.

Evaluation: This option is the most accurate summary, as it correctly reflects both the pattern

of musical productivity and the potential link to sexual success discussed in the passage.

Why It's Correct: It captures the key points of the passage, including the observed pattern and the connection to sexual success, supported by relevant examples.

Correct Answer:

D) Musical productivity peaks during young adulthood, declines with age, and appears to be linked to sexual success, as observed in the lives of artists like Jimi Hendrix and Robert Plant.

Explanation:

Option D is the best summary because it accurately reflects the passage's key points: the unique pattern of musical productivity over a musician's life, the potential link to sexual success, and specific examples that support this connection.

Option A is incorrect because it downplays the connection to sexual success and inaccurately suggests a similarity with other survival-related activities.

Option B is incomplete as it focuses too much on the anecdotal nature of the evidence without capturing the observed pattern.

Option C is misleading as it overstates the role of sexual motivation, which is not fully supported by the passage.

Video Solution:

Q25 Text Solution:

Passage Summary:

The passage discusses how capitalism, though sharing core principles globally, manifests differently in various countries. It highlights how each nation blends capitalism with local policies, resulting in a variety of implementations.

Answer Choices:

Option A:

Explanation: This option highlights that capitalism is similar at its core but varies according to local contexts, blending free-market policies with unique elements in each country.

Evaluation: This option directly aligns with the main idea of the passage, making it the correct answer.

Option B:

Explanation: This option emphasizes that capitalism varies depending on the cultural and political context, mixing free-market and state intervention differently in each nation.

Evaluation: This option is strong but less specific in highlighting the unique local elements than Option A. It highlights capitalism as a globally dominant economic system which is too generic and out of context.

Option C:

Explanation: This option suggests that while capitalism is similar globally, its application leads to the dominance of local elites and marginalization of weaker groups. This interpretation introduces a biased view not supported by the passage.

Evaluation: This option is misleading because it subtly shifts the focus from the diversity of capitalism to its alleged negative outcomes, which is not discussed in the passage.

Option D:

Explanation: This option suggests that capitalism faces challenges in implementation, leading to inconsistencies within nations, especially regarding social equity.

Evaluation: This option misinterprets the passage by focusing on challenges rather than the diversity of capitalist models.

Correct Answer:

A) Capitalism, while fundamentally similar in its core principles, manifests in diverse ways across different countries, each blending free-market policies with unique local elements.

Explanation:

Option A accurately captures the passage's central theme, which is the variation in capitalism's implementation across different countries while maintaining core principles.

Option B is relevant but lacks the specificity of A.

Option C is a trap, subtly introducing a negative bias that shifts the focus away from the passage's discussion on the diversity of capitalism and toward unsubstantiated claims about its outcomes.

Option D is the least accurate, misinterpreting the passage entirely.

Thus, **Option A** remains the best summary of the paragraph, while **Option C** is deliberately misleading, making it an incorrect choice despite its apparent similarity.

Video Solution:

Q26 Text Solution:

Passage Summary:

The paragraph explains how multi-nest ant colonies remain distinct and territorial due to chemical differences, resulting in a patchwork of separate groups. In contrast, unicolonial ants can expand rapidly and create a unified social system by treating all members of their kind as allies, leading to a more integrated and widespread presence.

Answer Choices:

Option A:

Explanation: This option highlights the distinction between multi-nest and unicolonial ants, noting the territorial nature of multi-nest colonies and the unified social systems and expansion of unicolonial ants.

Evaluation: This option captures the key points of the paragraph but does not fully emphasize the

chemical distinctions, territorial boundaries and separate group formation as clearly as Option B.

Option B:

Explanation: This option accurately summarizes the differences between multi-nest colonies and unicolonial ants, emphasizing territorial boundaries, chemical distinctions, and the unified expansion of unicolonial ants.

Evaluation: This option is the most accurate summary, reflecting both the territorial nature of multi-nest colonies and the rapid expansion and unity of unicolonial ants.

Option C:

Explanation: This option incorrectly describes multi-nest colonies as being spread and competitive, and unicolonial ants as having strict territorial limits, which contradicts the passage's focus on the expansion and unity of unicolonial ants.

Evaluation: This option misinterprets the passage by inaccurately representing the behavior and expansion of both types of ants.

Option D:

Explanation: This option inaccurately suggests that multi-nest colonies are limited by physical barriers and chemical differences, and that unicolonial ants remain within specific areas, which does not align with the passage's information on unicolonial ants' expansion and unification.

Evaluation: This option is incorrect because it misrepresents the territorial and expansion characteristics of both multi-nest and unicolonial ants.

Correct Answer:

B) Multi-nest colonies of ants are characterized by territorial boundaries and chemical distinctions, creating separate groups, while unicolonial ants expand and unify their social structure by treating all their kind as allies.

Video Solution:

**Q27 Text Solution:**

Correct Option

B

Solutions

Answer Key: B. Correct. This option best summarises the paragraph by tracing the evolution from Aristotle's focus on universals to the modern emphasis on particulars, explicitly acknowledging the empiricist turn that drives this shift, and citing heteroglossia in modern novels as the exemplar.

Explanation of Each Answer Option:

Option B:

Explanation: Accurately captures all three pillars of the passage: the ancient-to-modern shift, the empiricist influence behind that shift, and the manifestation of this realism in the novel's heteroglossia.

Option A:

Explanation: Largely accurate on the shift and the example of heteroglossia, but it omits the empiricist hinge, making the summary less complete than B.

Option C:

Explanation: Content is essentially correct and mentions empiricism and heteroglossia, but it reads as a compressed rewording and does not foreground the causal influence as clearly and smoothly as B.

Option D:

Explanation: States the arc and mentions heteroglossia, yet it lacks the explicit role of empiricism in effecting the change, so it is less precise as a full summary.

Video Solution:

**Q28 Text Solution:**

Correct Answer: C) The essential problem of kitsch is that it deceives by replacing the demanding work of authentic feeling with a stock emotional response, shielding us from reality.

Explanation:

This option is the most precise summary because it correctly synthesises the author's entire argument, including the crucial distinction that elevates the critique. It identifies "states the *mechanism* of deception ("replacing the demanding work of authentic feeling with a stock emotional response"), and clarifies the ultimate *consequence* of that deception ("shielding us from reality").

Incorrect Answers:

Option (A) is incorrect because it contains a direct, albeit subtle, contradiction of the author's main thesis. While it correctly identifies the mechanism of substitution, it concludes that the primary failing is "aesthetic." The author explicitly states the opposite in the final sentence: "the primary failing of kitsch is not aesthetic, but ethical."

Option (B) is incorrect because it is critically incomplete. It very accurately describes the *mechanism* that the author identifies as the "substitution of genuine... engagement." However, it presents this mechanism as the "fundamental flaw" itself. The author argues that this mechanism is the *source* of the flaw, but the flaw itself is the deeper *ethical* deception of being shielded from reality, a final concluding point that this option omits.

Option (D) is incorrect because it reverses the author's logic and misrepresents the conclusion.

It begins with the consequence ("offering a comforting deception") and presents it as a cause for the mechanism. Furthermore, it concludes that kitsch becomes "merely art in poor taste," a definition the author explicitly rejects as "simplistic" in the first sentence.

Video Solution:

Q29 Text Solution:

Understand the Main Idea:

The author discusses the problematic distinction between tourists and travelers. This distinction often leads to a negative perception of what is considered "touristy" and can ultimately ruin a vacation. The author criticizes this fixation and apologizes for indulging in it in the past.

Solution:

Option C:

Correct. This option accurately captures the main idea of the paragraph. It mentions the author's criticism of the distinction between tourists and travelers and highlights that this fixation can spoil a vacation.

Explanation: The paragraph focuses on the unnecessary and harmful nature of distinguishing between tourists and travelers. The term "spoil a vacation" is directly taken from the paragraph, making this option a precise summary.

Option B:

Incorrect. This option presents an extreme viewpoint.

Explanation: The paragraph does not argue that travelers should strive to blend in with locals to avoid being seen as tacky tourists. It critiques the fixation on such distinctions, rather than advocating for blending in.

Option A:

Incorrect. This option is very similar to the correct one but has a slight deviation.

Explanation: It mentions the negative connotation of "touristy". But it wrongly highlights the absurdity of differentiating between tourists and locals in place of travelers. It does not encapsulate the critique of the fixation on these distinctions as accurately as option C. This subtle shift in focus makes it inaccurate.

Option D:

Incorrect. This option misinterprets the author's main point.

Explanation: The paragraph is not about avoiding popular tourist spots to prevent a vacation from being ruined. It is about the broader issue of the negative perception of tourists versus travelers and how this fixation can spoil a vacation, not specifically about avoiding certain places.

Video Solution:

Q30 Text Solution:

Correct Answer:

(C) The idea of fiction must be redefined to prevent it from being used by bad actors as a defence mechanism against legal or moral consequences.

Explanation:

The passage raises concerns about the **misuse of the concept of fiction** outside media disclaimers, particularly as a tool for bad actors to **evade accountability** or to **discredit unfavourable truths**. It calls for a **re-evaluation or redefinition** of fiction to prevent such exploitation. Option (C) best captures this **normative thrust**—that our understanding of fiction should evolve to guard against its misuse in public discourse and legal contexts.

Incorrect Answers:

- (A) is close but broadens the focus too much by framing the issue as a general blur between fact and fiction; it misses the author's emphasis on **intentional misuse** by bad actors. Also, it misses the normative tone of the author's message.
- (B) rightly points out the misuse of 'fiction' to avoid scrutiny but underplays the call to action present in the passage—the need to **rethink the nature of fiction**.
- (D) oversimplifies the issue by focusing on fiction being misunderstood as hearsay, which is a

symptom, not the **central concern**—the core is about how that misunderstanding is strategically exploited. This option also misses the point of 'intentional use of fiction' by bad actors.
